Latest week total	Discovered this period	Seller adjustments tracked

INVENTORY GROWTH	NEIGHBOURHOODS TRACKED
-71.6%	67
First → last week	Across 8 cities

01 Executive Summary

The Nigerian residential sales market in June 2026 experienced a significant contraction in active inventory, with cumulative active listings falling by 71.6% from 116 in the first week to 33 in the final week. Despite this sharp decline in active options, transaction and listing activity remained dynamic, supported by 351 total new listings and 327 cumulative active listings across 67 unique neighbourhoods. The market's median price fluctuated between ₦200.0M and ₦230.0M, reflecting a highly capital-intensive landscape dominated by premium developments.

This contraction in active listings suggests rapid absorption or a strategic withdrawal of inventory by developers adjusting to macroeconomic pressures. The mid-month pause in new listings on 15 June 2026, which recorded zero new entries, coincided with a peak in price reductions (19 events), indicating a temporary phase of market recalibration where sellers prioritised clearing existing stock over introducing new supply.

Key Takeaways

- → Active sales listings fell by 71.6% over June 2026, indicating a rapid tightening of available residential inventory.
- → Lagos dominated the sales market with 230 active listings and a premium median price of ₦250.0M.
- → Abuja maintained a strong secondary position with a median price of ₦185.0M across 16 active neighbourhoods.
- → A total of 71 price reductions, mostly in Lagos, signal tactical discounting to clear high-end inventory.

02 Inventory Distribution — Most Active Areas

Inventory distribution was heavily concentrated in Lagos, which accounted for 230 of the 327 cumulative active listings and 323 of the 351 new listings. Abuja followed as the second most active hub with 61 active listings across 16 neighbourhoods. Outside these primary nodes, inventory remained extremely thin, with Port Harcourt recording 14 active listings, Ogun 12, and other states like Edo, Enugu, and Imo registering negligible volumes. The rapid decline in weekly active listings from 116 to 33 indicates that supply is not keeping pace with demand, or that listing lifespans have shortened significantly. The dominance of Lagos and Abuja highlights the highly centralised nature of institutional real estate investment in Nigeria, leaving secondary markets largely underserved.

03 Pricing Tiers — Expensive & Affordable

The national sales market maintained a high pricing floor, with the weekly median price peaking at ₦230.0M on 8 June 2026 before stabilising at ₦200.0M. Lagos led the premium segment with a median price of ₦250.0M, followed closely by Enugu at ₦190.0M and Abuja at ₦185.0M. Port Harcourt also demonstrated strong luxury positioning with a median price of ₦180.0M. Conversely, affordability was concentrated in regional markets. Imo recorded the lowest median price at ₦3.0M, followed by Ogun at ₦9.5M and Edo at ₦12.0M. This stark divergence underscores a highly bifurcated market where prime metropolitan assets command massive premiums, while secondary regional markets remain priced for entry-level buyers.

04 Regional Deep Dive

Lagos

Lagos remains the undisputed engine of the residential sales market, accounting for 41 of the 67 unique neighbourhoods, 230 active listings, and 323 new listings. The state's median price of ₦250.0M reflects robust demand for high-end residential assets, particularly in key nodes like Ibeju-Lekki and Ikate, which led with an average of 2.2 active listings per week. The high volume of new listings (323) alongside 49 price reductions indicates a highly competitive but liquid environment where developers are actively trading.

NEIGHBOURHOODS	TOP AREA	MEDIAN PRICE
41	Ibeju-Lekki	₦250.0M

Abuja (FCT)

Abuja's residential sales market demonstrated stable demand across 16 neighbourhoods, securing 61 active listings and 21 new listings. The capital city maintained a premium median price of ₦185.0M, with Life Camp emerging as the top-performing neighbourhood. However, the presence of 13 price reductions suggests that sellers are facing some resistance at current pricing levels, requiring tactical discounts to close transactions.

NEIGHBOURHOODS	TOP AREA	MEDIAN PRICE
16	Life Camp	₦185.0M

Other Cities (Ibadan, Enugu, Port Harcourt, Edo, Ogun, Imo)

Outside the dual cores of Lagos and Abuja, Port Harcourt showed notable strength with 14 active listings, 7 new listings, and a high median price of ₦180.0M. In contrast, markets like Ibadan (median of ₦60.0M) and Ogun (median of ₦9.5M) offered more accessible entry points, while Enugu's single active neighbourhood posted a high median of ₦190.0M, indicating isolated luxury pockets in the eastern region.

05 Weekly Market Trajectory

PROPERTY CLASS	WEEK START	ACTIVE LISTINGS	NEW LISTINGS	PRICE REDUCTIONS	MEDIAN
2 BED FLAT	2026-06-08	3	16	0	₦195.0M
	2026-06-15	3	0	2	₦195.0M
3 BED FLAT	2026-06-01	11	3	0	₦135.0M
	2026-06-08	4	0	0	₦120.0M
COMMERCIAL OFFICE RETAIL	2026-06-01	3	0	3	₦108.0M
DETACHED HOUSE	2026-06-08	3	0	2	₦1.65B
LAND RESIDENTIAL	2026-06-01	4	0	1	₦34.8M
	2026-06-08	3	8	1	₦14.5M

06 Price Reduction Analysis

A total of 71 price reduction events occurred in June 2026, peaking at 19 reductions during the week of 15 June 2026. Lagos accounted for the vast majority (49), followed by Abuja (13) and Port Harcourt (4). This concentration of discounts in the most expensive markets suggests that initial pricing strategies may have overreached, forcing developers to make concessions to maintain liquidity and accelerate sales velocity.

Peak reduction week: 2026-06-15 with 19 events.

07 Market Outlook

The sharp 71.6% reduction in active listings, combined with steady median prices around ₦200.0M, points to a supply-constrained sales market in the near term. Developers are likely to remain cautious about launching new phases without clear pre-sales commitments. Expect prime Lagos and Abuja nodes to maintain their pricing power, while secondary markets will require significant infrastructure catalysts to attract institutional capital.

RENTALS MARKET ANALYSIS

PEAK ACTIVE LISTINGS	NEW LISTINGS	PRICE REDUCTIONS
51	559	120
Latest week total	Discovered this period	Seller adjustments tracked

INVENTORY GROWTH	NEIGHBOURHOODS TRACKED
-58.9%	54
First → last week	Across 5 cities

01 Executive Summary

The residential rental market in June 2026 was characterised by high velocity and a significant supply-demand mismatch. Cumulative active listings fell by 58.9% from 124 in the first week to 51 in the final week, even as 559 new rental listings flooded the market. This rapid absorption indicates robust tenant demand, particularly in prime metropolitan areas, which pushed the weekly median rent from ₦5.5M/yr to a peak of ₦10.0M/yr on 15 June 2026, before settling at ₦7.0M/yr.

The rental market's dynamics reflect a strong preference for leasing over purchasing in a high-interest-rate environment. The peak in median rent to ₦10.0M/yr coincided with a complete pause in new listings during the week of 15 June 2026, demonstrating how quickly restricted supply can drive up rental costs in key urban centres.

Key Takeaways

→ Active rental listings decreased by 58.9% in June 2026, reflecting rapid tenant absorption across major cities.

→ Lagos dominated rental supply with 360 active listings and a median rent of ₦7.0M/yr.

→ Abuja commanded a premium median rent of ₦13.0M/yr, driven by high-end neighbourhoods like Asokoro.

→ A high volume of 120 price reductions indicates strong tenant price sensitivity and rapid landlord recalibration.

02 Inventory Distribution — Most Active Areas

Rental inventory was overwhelmingly concentrated in Lagos, which hosted 360 of the 393 cumulative active listings and 540 of the 559 new listings across 43 neighbourhoods. Abuja provided a modest secondary rental market with 25 active listings across 8 neighbourhoods. The rest of the country saw minimal rental activity, with Ibadan, Ogun, and Port Harcourt combined accounting for fewer than 10 active listings. The high concentration of listings in Lagos highlights its status as the primary destination for corporate tenants and young professionals. The rapid decline in active listings to 51 by the end of the month suggests that high-quality rental stock is being absorbed almost immediately upon entering the market.

03 Pricing Tiers — Expensive & Affordable

Rental pricing exhibited wide variations, with the national median rent peaking at ₦10.0M/yr mid-month. Port Harcourt recorded the highest regional median rent at ₦15.0M/yr, albeit based on limited inventory in GRA Port Harcourt. Abuja followed with a median rent of ₦13.0M/yr, driven by premium districts like Asokoro, while Lagos posted a median rent of ₦7.0M/yr. On the affordable end, Ogun offered the lowest median rent at ₦1.2M/yr in Obafemi Owode, followed by Ibadan at ₦2.7M/yr. Within Lagos, Orchid and Chevy View Estate emerged as highly competitive nodes, offering median rents of ₦2.9M/yr (with a 28.1-day days-on-market average) and ₦3.4M/yr (with a rapid 7.8-day average) respectively, representing the sweet spot for middle-income suburban rentals.

04 Regional Deep Dive

Lagos

Lagos remains the core driver of rental activity, accounting for 360 active listings and 540 new listings. The state's median rent of ₦7.0M/yr is supported by high-demand micro-markets like Orchid, which led active listings with an average of 5.0 per week. The presence of 108 price reductions in Lagos indicates that while demand is strong, tenants are highly price-sensitive, forcing landlords to adjust expectations to avoid prolonged vacancies.

NEIGHBOURHOODS	TOP AREA	MEDIAN PRICE
43	Orchid	₦7.0M/yr

Abuja (FCT)

Abuja's rental market, though smaller with 25 active listings, commanded a premium median rent of ₦13.0M/yr across 8 neighbourhoods, led by Asokoro. The market saw 11 new listings and 10 price reductions, indicating that high-end rental units in the capital are facing some affordability resistance, requiring landlords to offer concessions to secure creditworthy tenants.

NEIGHBOURHOODS	TOP AREA	MEDIAN PRICE
8	Asokoro	₦13.0M/yr

Other Cities (Ibadan, Enugu, Port Harcourt, Edo, Ogun, Imo)

Rental activity in other states was extremely sparse. Port Harcourt recorded a high median rent of ₦15.0M/yr for its single active listing in GRA Port Harcourt, reflecting a highly exclusive corporate rental niche. Ibadan offered a more accessible profile with 4 active listings, 8 new listings, and a median rent of ₦2.7M/yr, while Ogun remained the most affordable at ₦1.2M/yr.

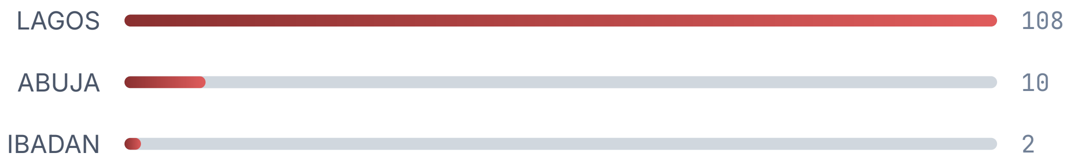
06 Price Reduction Analysis

The rental market saw 120 price reduction events, peaking at 36 reductions during the week of 8 June 2026. Lagos accounted for 108 of these reductions, while Abuja recorded 10. This high volume of rental discounts suggests that landlords who initially listed properties at aggressive premiums had to quickly recalibrate to match tenant budgets, particularly in highly competitive middle-market segments.

Peak reduction week: 2026-06-08 with 36 events.



07 Market Outlook

The rental market is expected to remain highly competitive, with strong demand continuing to compress active inventory. As inflation and economic pressures persist, tenants will increasingly seek value, driving demand toward well-located middle-market estates like Orchid and Chevy View. Landlords who price realistically from the outset will benefit from minimal vacancy periods, as evidenced by Chevy View's low 7.8 days on market.

08 Methodology & Data Notes

Data source: PS-0 PropertyScraper autonomously collects listings from PropertyPro.ng, PrivateProperty.com.ng, and NigeriaPropertyCentre.com on a weekly discovery cadence with mid-week health checks.

Neighbourhood normalisation: Raw neighbourhood strings from all portals are normalised to a canonical name via a manually-curated mapping table. Only neighbourhoods with ≥90% normalisation coverage are included in analysis.

Price storage: All prices are stored internally as 64-bit integer kobo values to eliminate floating-point arithmetic errors. NGN figures displayed in this report are exact integer divisions by 100.

Median vs. mean pricing: Median is used throughout to reduce skew from outlier luxury listings. P25, P75, and P90 data are available in the source dataset but excluded from this summary report for brevity.

Price reductions: An event is recorded when a listing's price decreases between two consecutive observations. Multiple reductions on the same listing count as separate events.

Days on market (DOM): Computed as the number of days between a listing's first observed date and the snapshot date. Listings present since before the pipeline's inception show DOM from the first observation date, not the actual listing date.

Outage handling: On weeks where portal access was blocked or failed, active inventory is carried forward from the prior week. New listing counts are recorded as zero for that week. These weeks are noted in the weekly table.

09 Disclaimer
