01

Executive Summary

Analysis of the residential sales market in July 2026, observed through the PS-0 PropertyScraper lens, reveals a highly concentrated market dominated by Lagos and Abuja. Across 144 unique neighbourhoods, cumulative active listings reached 1,133, supported by 922 new listings. However, the market experienced a sharp contraction in online visibility in the final week of the month, with active listings dropping from 386 in the week of 20 July to just 18 in the week of 27 July, representing a -95.4% growth from the first to the last week. Pricing dynamics remained relatively stable for most of the month, with the weekly median price holding firm at ₦250.0M during the mid-month weeks before dropping to ₦177.5M in the final week as active listings dwindled. This late-month contraction in active listings and the absence of new listings suggest a significant cyclical or technical adjustment in online property syndication rather than a physical market collapse.
--

Key Takeaways

- Lagos dominated the online sales market, accounting for 860 of the 1,133 cumulative active listings.
- Abuja recorded the highest regional median sales price at ₦350.0M across 32 unique neighbourhoods.
- Epe and Ikorodu represent highly liquid affordable entry points, both averaging a rapid 1.0-day Days on Market.
- A sharp -95.4% contraction in active listings occurred in the final week, ending with just 18 active listings.

Data Scope & Scraper Limitations: This report represents observations collected solely through the PS-0 PropertyScraper pipeline from advertised online listings. It should be understood as a specific digital lens on advertised prices and online inventory, not as an absolute, exhaustive generalisation of the entire physical real estate market across Nigeria.

02

Inventory Distribution — Most Active Areas

The distribution of cumulative active listings is heavily skewed towards Lagos, which accounted for 860 of the 1,133 cumulative active listings. Magodo emerged as the most active neighbourhood, averaging 4.9 active listings per week, followed closely by Lekki Phase 1 and Lekki, both averaging 4.0 active listings per week. This concentration highlights that online listing activity remains clustered around established premium and mid-market nodes in Lagos. Outside Lagos, Abuja maintained a notable presence with 131 active listings across 32 neighbourhoods, while Ibadan recorded 73 active listings. The rest of the analysed cities, including Ogun (32 active listings) and Port Harcourt (18 active listings), showed minimal online footprint, indicating that digital real estate marketing platforms are still predominantly leveraged in primary metropolitan centres.

03

Pricing Tiers — Expensive & Affordable

The pricing landscape reveals a wide disparity between premium coastal developments and emerging mainland suburbs. At the affordable end of the spectrum, Epe recorded an average weekly median price of ₦8.5M with a rapid Days on Market (DOM) of 1.0 day, while Ikorodu stood at ₦30.5M with a 1.0-day DOM. These figures contrast sharply with established prime locations such as Lekki Phase 1, which commanded an average weekly median price of ₦588.4M with a longer DOM of 24.9 days, and Lekki at ₦861.7M with a DOM of 2.7 days. The high median prices in Lekki and Lekki Phase 1 reflect the premium placed on serviced, multi-family residential units, though the extended DOM in Lekki Phase 1 suggests a more cautious buyer profile at that price point. Magodo represents a strong mid-to-high mainland alternative, posting an average weekly median price of ₦412.1M with a DOM of 1.0 day, indicating robust demand and rapid transaction velocity for premium mainland gated estates.

04

Regional Performance Deep Dive

Lagos remains the undisputed anchor of the online sales market, accounting for 90 of the 144 unique neighbourhoods and 860 cumulative active listings. The state's median price of ₦270.0M reflects a market dominated by high-value developments, with Magodo leading as the top neighbourhood. The high volume of new listings (712) relative to active listings indicates rapid inventory turnover, although the 31 price reductions suggest that some sellers are adjusting expectations to match liquidity constraints. Abuja's residential sales market, represented by 32 neighbourhoods, exhibited a high median price of ₦350.0M, surpassing the Lagos median. With 131 active listings and 102 new listings, Games Village emerged as the top-performing neighbourhood. The high median price reflects the dominance of premium diplomatic and administrative residential zones, while the 7 price reductions indicate a minor but present pressure on sellers to discount prices to secure transactions. The secondary markets showed varied activity, with Ibadan leading the tier-two cities with 73 active listings and a median price of ₦75.8M. Ogun recorded 32 active listings with a median price of ₦30.0M, driven by commuter demand in Mowe. Port Harcourt registered 18 active listings with a median price of ₦75.0M, while Enugu (9 active listings, ₦42.5M median) and Imo (8 active listings, ₦50.0M median) remained quiet. Edo and Nassarawa recorded negligible activity with 1 active listing each, at median prices of ₦10.2M and ₦6.5M respectively.

06 Price Reduction Analysis

A total of 46 price reduction events were observed over the month, peaking in the week of 13 July with 14 reductions. Lagos accounted for the vast majority of these adjustments with 31 reductions, followed by Abuja with 7. This trend suggests that while initial asking prices remain high, a subset of developers and vendors are actively discounting to stimulate liquidity, particularly in the high-end segments where transaction cycles are typically longer.

Peak reduction week: 2026-07-13 with 14 events.

07

Market Outlook

The sharp drop in active listings in the final week of July 2026 suggests a potential consolidation or a seasonal pause in online listing syndication. Investors should monitor whether this inventory contraction persists into August. If listings recover, the strong underlying demand in mid-market mainland locations like Magodo and affordable hubs like Epe suggests that capital will continue to flow towards assets with rapid transaction velocities.

RENTALS MARKET ANALYSIS

PEAK ACTIVE LISTINGS 8 Latest week total	NEW LISTINGS 930 Discovered this period	PRICE REDUCTIONS 53 Seller adjustments tracked
INVENTORY GROWTH -97.8% First → last week	NEIGHBOURHOODS TRACKED 118 Across 6 cities	

01

Executive Summary

The residential rental market in July 2026, as observed through the PS-0 PropertyScraper lens, demonstrated robust initial activity before experiencing a late-month contraction similar to the sales sector. Across 118 unique neighbourhoods, cumulative active listings reached 1,080, supported by 930 new listings. The market maintained a stable median rent of ₦8.0M/yr for the first three weeks of the month, before a dramatic drop in active listings to just 8 in the final week pushed the median rent up to ₦15.0M/yr.

This late-month spike in median rent to ₦15.0M/yr, coupled with the drop in active listings (representing a -97.8% growth from the first to the last week), indicates that only high-end luxury listings remained active online at the end of the month. The rental market remains highly concentrated in Lagos, which accounted for 892 of the 1,080 cumulative active listings, reflecting the city's status as the primary economic hub.

Key Takeaways

- Lagos dominated rental listings, accounting for 892 of the 1,080 cumulative active listings observed.
- Lekki Phase 1 was the most active rental neighbourhood, averaging 5.0 active listings per week.
- Abuja recorded a high median rent of ₦12.0M/yr, driven by premium demand in Katampe.
- Landlords in Lagos are highly sensitive to vacancy, driving 46 of the 53 total price reductions.

Data Scope & Scraper Limitations: This report represents observations collected solely through the PS-0 PropertyScraper pipeline from advertised online listings. It should be understood as a specific digital lens on advertised prices and online inventory, not as an absolute, exhaustive generalisation of the entire physical real estate market across Nigeria.

02

Inventory Distribution — Most Active Areas

Lagos dominated rental inventory, with Lekki Phase 1 leading all neighbourhoods with an average of 5.0 active listings per week. Other high-activity areas included Lekki (4.0), Orchid (3.9), and Ikoyi (3.4). This concentration highlights that online rental platforms are heavily utilised for premium properties in the Lagos Island corridor, where corporate tenants and high-net-worth individuals are concentrated. In contrast, Abuja's rental market showed moderate activity with 135 active listings across 26 neighbourhoods, led by Katampe with an average of 2.2 active listings per week. Ibadan recorded 46 active listings, while Ogun and Port Harcourt showed minimal online rental presence with 5 and 1 active listings respectively, indicating that digital rental listings are almost exclusively a Lagos and Abuja phenomenon.

Rental pricing was characterised by extreme premium tiers in Lagos Island. Lekki Phase 1 recorded an average weekly median rent of ₦30.9M/yr with a Days on Market (DOM) of 8.5 days, while Ikoyi reached ₦35.7M/yr with a DOM of 21.7 days. These figures reflect the intense demand for luxury apartments and townhouses in these prime locations, though the longer DOM in Ikoyi suggests a more selective tenant pool. More affordable options within the premium corridor were observed in Orchid, which posted an average weekly median rent of ₦9.6M/yr and a DOM of 12.7 days. Lekki averaged ₦29.0M/yr with a DOM of 16.0 days. The relatively short DOM across these premium neighbourhoods indicates that despite high rental costs, properties are being absorbed quickly by a market facing a shortage of quality rental stock.

Regional Performance Deep Dive

Lagos remains the core driver of online rental activity, accounting for 83 neighbourhoods and 892 active listings. The overall median rent of ₦8.0M/yr reflects a diverse mix of mid-market and luxury listings, though the market is heavily influenced by the Lekki Phase 1 node. The high volume of new listings (759) and 46 price reductions indicate a highly dynamic market where landlords are actively adjusting prices to secure tenants quickly. Abuja's rental market, comprising 26 neighbourhoods, recorded a median rent of ₦12.0M/yr, significantly higher than the Lagos median. Katampe emerged as the top neighbourhood, driving much of the 135 active listings. The 7 price reductions observed in Abuja suggest that while asking rents remain high, landlords are willing to negotiate to avoid prolonged vacancies in a competitive corporate tenant market. Rental activity outside the two major cities was extremely limited. Ibadan recorded 46 active listings with a modest median rent of ₦4.8M/yr, indicating a stable but lower-value rental market. Ogun registered only 5 active listings with a median rent of ₦2.8M/yr, led by Magboro. Port

Harcourt and Enugu recorded negligible online rental activity, with Port Harcourt posting 1 active listing at ₦4.5M/yr and Enugu posting 1 active listing at ₦10.0M/yr.

06

Price Reduction Analysis

A total of 53 price reduction events were recorded in the rental market, peaking in the week of 6 July with 21 reductions. Lagos accounted for the bulk of these adjustments with 46 reductions, while Abuja recorded 7. This concentration of price reductions in Lagos suggests that landlords in premium areas are highly sensitive to vacancy costs and are quick to discount rents to secure immediate occupancy.

Peak reduction week: 2026-07-06 with 21 events.

07

Market Outlook

The rental market is expected to remain highly competitive in premium Lagos and Abuja nodes. The sharp contraction in active listings at the end of July suggests a potential data reporting anomaly or a rapid absorption of available stock. If inventory remains low,

upward pressure on rents in prime locations like Lekki Phase 1 and Katampe is likely to intensify, favouring landlords with immediate yield expectations.

08

Methodology & Data Notes

Data source: PS-0 PropertyScraper autonomously collects listings from PropertyPro.ng, PrivateProperty.com.ng, and NigeriaPropertyCentre.com on a weekly discovery cadence with mid-week health checks.

Neighbourhood normalisation: Raw neighbourhood strings from all portals are normalised to a canonical name via a manually-curated mapping table. Only neighbourhoods with $\geq 90\%$ normalisation coverage are included in analysis.

Price storage: All prices are stored internally as 64-bit integer kobo values to eliminate floating-point arithmetic errors. NGN figures displayed in this report are exact integer divisions by 100.

Median vs. mean pricing: Median is used throughout to reduce skew from outlier luxury listings. P25, P75, and P90 data are available in the source dataset but excluded from this summary report for brevity.

Price reductions: An event is recorded when a listing's price decreases between two consecutive observations. Multiple reductions on the same listing count as separate events.

Days on market (DOM): Computed as the number of days between a listing's first observed date and the snapshot date. Listings present since before the pipeline's inception show DOM from the first observation date, not the actual listing date.

Outage handling: On weeks where portal access was blocked or failed, active inventory is carried forward from the prior week. New listing counts are recorded as zero for that week. These weeks are noted in the weekly table.
