Nigerian Residential Real Estate Market Report

September 2026 — 2026-09-07 to 2026-09-28

PS-0 PropertyScraper 10 Cities 246 Neighbourhoods 4 Weeks of Data Published October 1, 2026

Sales Market Analysis

PEAK ACTIVE LISTINGS	NEW LISTINGS	PRICE REDUCTIONS	INVENTORY GROWTH	NEIGHBOURHOODS TRACKED
8,026	723	38	7.2%	246
Latest week total	Discovered this period	Seller adjustments tracked	First → last week	Across 10 cities

01 Executive Summary

Analysis of the PS-0 PropertyScraper lens reveals a steady expansion in the Nigerian residential sales market during September 2026. Cumulative active listings reached 31,340 across 246 unique neighbourhoods, with active listings peaking at 8,026 in the final weeks, representing a 7.2% growth from the start of the month. This expansion was supported by 723 new listings, though momentum cooled by the final week of the month when new listings dropped to zero.

Pricing trends show a marginal downward adjustment in the overall median listing price, sliding from ₦190.0M in the first week to a stable ₦185.0M in the final fortnight. This minor correction suggests a slight recalibration by sellers to meet buyer expectations, particularly as active inventory accumulated. The market remains highly concentrated, with Lagos dominating both listing volumes and high-value transactions.

Key Takeaways

→ Active sales listings grew 7.2% over September, peaking at 8,026 listings in the final week.

→ Lagos dominated sales activity, accounting for 24,856 active listings and a median price of ₦210.0M.

→ Banana Island remains the most expensive market, averaging ₦4430.6M with a swift 3.6 days on market.

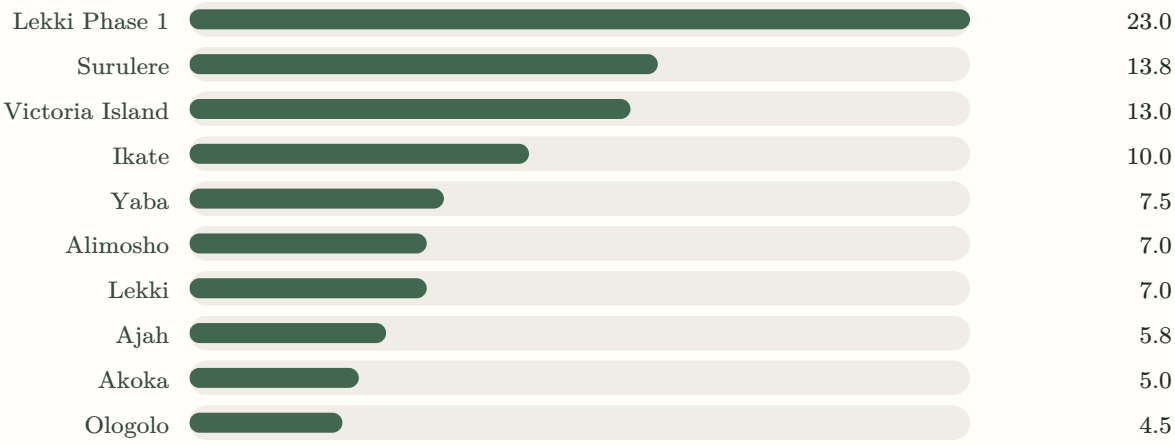

→ Abuja commanded a premium median sales price of ₦220.0M, outpacing the Lagos median of ₦210.0M.

Data Scope & Scraper Limitations: This report represents observations collected solely through the PS-0 PropertyScraper pipeline from advertised online listings. It should be understood as a specific digital lens on advertised prices and online inventory, not as an absolute, exhaustive generalisation of the entire physical real estate market across Nigeria.

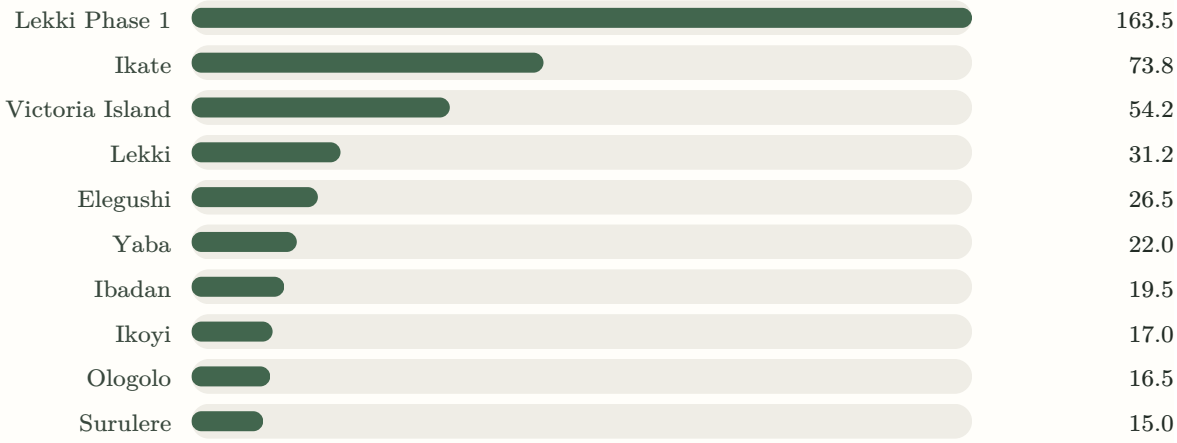

02 Inventory Distribution — Most Active Areas

The distribution of active listings is heavily skewed towards prime Lagos corridors. Lekki and Lekki Phase 1 led the market, averaging 50.1 and 47.8 active listings per week, respectively, followed closely by Ikota at 39.4. This concentration highlights a strong developer and seller focus on the Lekki-Ajah coastal axis. Outside Lagos, Ibadan and Asaba (Edo) emerged as notable secondary hubs, averaging 18.7 and 18.0 active listings per week, signalling growing developer interest in regional capitals.

03 Pricing Tiers — Expensive & Affordable

The luxury segment is defined by an exceptionally high ceiling, led by Banana Island with an average weekly median price of ₦4430.6M and a remarkably short Days on Market (DOM) of 3.6 days, followed by Ikoyi at ₦3101.5M (DOM: 3.3 days). This rapid absorption of ultra-high-net-worth properties indicates robust liquidity at the top tier. Conversely, the affordable end of the market is represented by outlying or emerging areas such as Ilupeju at ₦1.5M (DOM: 33.0 days) and regional locations like Ohaji in Imo at ₦4.5M (DOM: 1.0 days), illustrating a vast pricing chasm across the scraped landscape.

04 Regional Performance Deep Dive

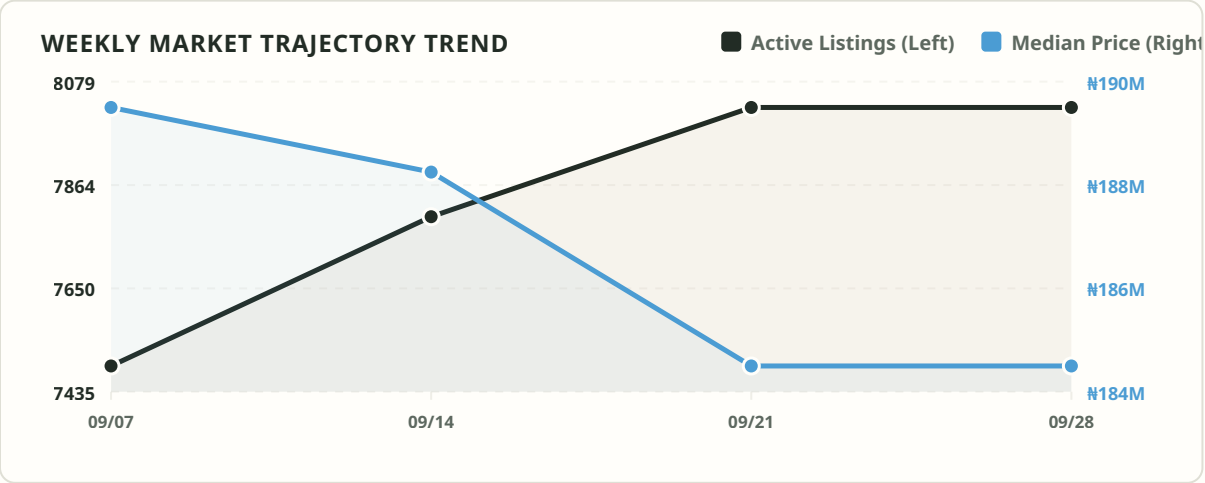

Lagos remains the undisputed anchor of the residential sales market, accounting for 133 neighbourhoods and 24,856 active listings. The state recorded 548 new listings and a median price of ₦210.0M, reflecting its status as the primary focus of real estate investment. Lekki continues to be the top-performing neighbourhood by volume, while prime areas like Banana Island and Ikoyi command the highest premiums, demonstrating resilient demand despite broader macroeconomic pressures. Abuja presents a highly premium profile, with 70 neighbourhoods represented and an active listing volume of 3,563. The capital city commanded a median listing price of ₦220.0M, surpassing the Lagos median. Katampe emerged as the top neighbourhood, while ultra-prime districts like Asokoro and Guzape maintained high pricing tiers at ₦904.2M (DOM: 7.4 days) and ₦807.2M (DOM: 3.3 days) respectively, indicating sustained institutional and high-net-worth demand. Beyond the primary hubs, regional markets showed varied activity. Ibadan led secondary cities with 1,407 active listings and a median price of ₦100.0M, while Port Harcourt recorded 325 active listings with a premium median price of ₦146.2M. Ogun State displayed a substantial footprint of 635 active listings but at a highly accessible median price of ₦20.0M, driven by commuter-belt developments. Conversely, markets like Kano (8 active listings, median ₦176.2M) and Nassarawa (12 active listings, median ₦6.5M) remain niche, low-volume environments within the scraped data.

06 Price Reduction Analysis

A total of 38 price reduction events were recorded during the month, peaking sharply in the first week (2026-09-07) with 19 reductions before tapering off. Lagos accounted for the vast majority of these adjustments with 27 events, followed by Ibadan with 5 and Abuja with 4. This front-loaded discounting behaviour suggests that sellers who entered the month with aggressive pricing quickly adjusted expectations to stimulate interest, though the low overall volume of reductions relative to total active listings indicates that most sellers remain willing to hold their asking prices.

Peak reduction week: 2026-09-07 with 19 events.

07 Market Outlook

The sales market is entering a phase of consolidation. While active listings grew by 7.2% over the month, the complete halt in new listings in the final week suggests a temporary pause in new supply as developers assess market absorption. The marginal decline in median price to ₦185.0M, combined with rapid transaction times in ultra-prime locations, suggests that well-priced luxury assets will continue to trade swiftly, while secondary and emerging markets may experience slower absorption unless pricing concessions are made.

Rentals Market Analysis

PEAK ACTIVE LISTINGS	NEW LISTINGS	PRICE REDUCTIONS	INVENTORY GROWTH	NEIGHBOURHOODS TRACKED
6,907	798	55	9.4%	184
Latest week total	Discovered this period	Seller adjustments tracked	First → last week	Across 6 cities

01 Executive Summary

The residential rental market, as observed through the PS-0 PropertyScraper lens, demonstrated strong expansion in September 2026. Cumulative active rental listings reached 26,737 across 184 unique neighbourhoods, with active listings growing by 9.4% from 6,311 in the first week to a peak of 6,907 in the final fortnight. This growth was supported by 798 new rental listings, which peaked mid-month before flattening out.

Despite the steady influx of inventory, rental pricing remained remarkably inelastic. The median weekly rental price held firm at ₦7.0M/yr throughout the entire month. This stability indicates a highly resilient demand base capable of absorbing new supply at current pricing levels, particularly in high-density, premium residential corridors where occupancy pressure remains elevated.

Key Takeaways

→ Active rental listings grew by 9.4% over the month, peaking at 6,907 listings in the final week.

→ The median rental price remained perfectly flat at ₦7.0M/yr throughout September, indicating stable demand.

→ Lagos accounted for 86.7% of active rental listings, with Lekki Phase 1 leading all neighbourhoods.

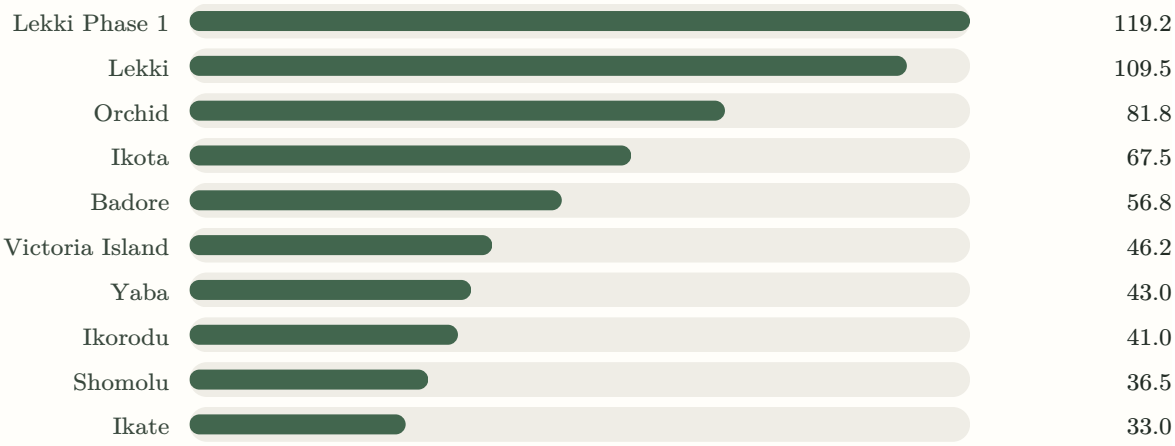

→ Abuja rentals commanded a premium median of ₦9.0M/yr, driven by high-end districts like Maitama.

Data Scope & Scraper Limitations: This report represents observations collected solely through the PS-0 PropertyScraper pipeline from advertised online listings. It should be understood as a specific digital lens on advertised prices and online inventory, not as an absolute, exhaustive generalisation of the entire physical real estate market across Nigeria.

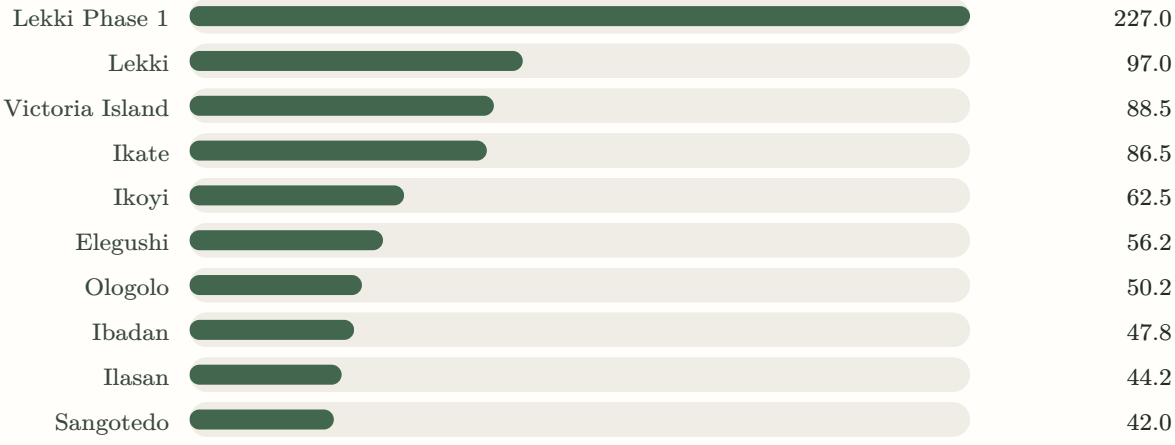

02 Inventory Distribution — Most Active Areas

Rental listing volumes were heavily concentrated in prime Lagos suburbs. Lekki Phase 1 led all neighbourhoods with an average of 62.4 active listings per week, followed by Lekki at 45.4 and Ikoyi at 39.2. This distribution highlights the intense rental activity along the Lekki-Ikoyi corridor, which serves as the primary residential hub for corporate professionals. Outside Lagos, Ibadan was the only regional market to break into the top ten, averaging 14.2 active listings per week.

03 Pricing Tiers — Expensive & Affordable

The rental market exhibits extreme stratification. The luxury ceiling is exceptionally high, led by Banana Island at ₦57.4M/yr (DOM: 3.8 days) and Ikoyi at ₦51.3M/yr (DOM: 3.6 days), reflecting robust corporate tenant demand. Conversely, the affordable end of the scraped market is dominated by mainland Lagos locations such as Bariga and Mushin, both averaging ₦1.0M/yr with a DOM of 1.0 day, indicating immediate absorption of low-cost housing options.

04 Regional Performance Deep Dive

Lagos remains the core driver of rental activity, representing 124 neighbourhoods and 23,202 active listings. The state recorded 704 new listings and maintained a median rental price of ₦7.0M/yr. The high concentration of listings in Lekki Phase 1 and Ikate, combined with rapid absorption rates, underscores the strong rental yields available in these middle-to-upper-tier coastal markets. Abuja's rental market presents a highly premium profile, with 52 neighbourhoods and 2,523 active listings. The capital city commanded a median rental price of ₦9.0M/yr,

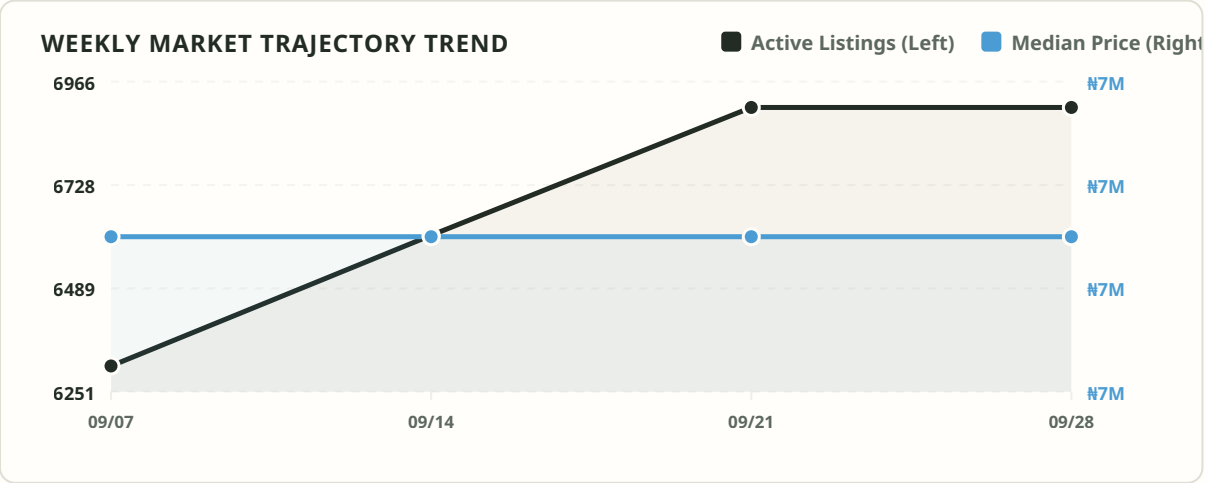

significantly higher than the Lagos median. Guzape emerged as the top rental neighbourhood, while prime districts like Maitama (₦34.0M/yr, DOM: 2.3 days) and Katampe (₦17.9M/yr, DOM: 1.7 days) continue to attract premium corporate and diplomatic tenants. Regional rental markets remain comparatively small but show distinct characteristics. Port Harcourt recorded a high median rental price of ₦12.0M/yr across 56 active listings, driven by corporate oil and gas tenancies. Ibadan offered a substantial secondary market with 834 active listings and a median price of ₦3.0M/yr. Ogun State provided affordable commuter options with 94 active listings at a median of ₦1.5M/yr, while Enugu remained a low-volume niche with 28 active listings and a median of ₦2.0M/yr.

06 Price Reduction Analysis

The rental market saw 55 price reduction events, heavily concentrated in the first week of the month (34 reductions) before dropping sharply. Lagos accounted for 49 of these reductions, with Abuja recording 5 and Port Harcourt 1. This front-loaded adjustment pattern suggests that landlords who listed properties with overly optimistic premiums at the start of the month quickly corrected their asking rents to avoid costly void periods, leading to the stable ₦7.0M/yr median observed thereafter.

Peak reduction week: 2026-09-07 with 34 events.

07 Market Outlook

The rental market is poised for continued stability. The 9.4% growth in active listings, paired with a flat median rent of ₦7.0M/yr, suggests that supply is expanding in lockstep with demand. The rapid absorption times (DOM under 3 days) across both ultra-luxury areas like Victoria Island and affordable mainland hubs like Shomolu indicate that rental demand remains deep, and landlords are likely to maintain strong pricing power in the coming quarter.

08 Methodology & Data Notes

Data source: PS-0 PropertyScraper autonomously collects listings from PropertyPro.ng, PrivateProperty.com.ng, and NigeriaPropertyCentre.com on a weekly discovery cadence with mid-week health checks.

Neighbourhood normalisation: Raw neighbourhood strings from all portals are normalised to a canonical name via a manually-curated mapping table. Only neighbourhoods with ≥90% normalisation coverage are included in analysis.

Price storage: All prices are stored internally as 64-bit integer kobo values to eliminate floating-point arithmetic errors. NGN figures displayed in this report are exact integer divisions by 100.

Median vs. mean pricing: Median is used throughout to reduce skew from outlier luxury listings. P25, P75, and P90 data are available in the source dataset but excluded from this summary report for brevity.

Price reductions: An event is recorded when a listing's price decreases between two consecutive observations. Multiple reductions on the same listing count as separate events.

Days on market (DOM): Computed as the number of days between a listing's first observed date and the snapshot date. Listings present since before the pipeline's inception show DOM from the first observation date, not the actual listing date.

Outage handling: On weeks where portal access was blocked or failed, active inventory is carried forward from the prior week. New listing counts are recorded as zero for that week. These weeks are noted in the weekly table.
