READER GUIDE

Questions this evidence can help you investigate.

Compare locations and property classes, understand the advertised stock competing for attention, and identify observations to validate further. Area benchmarks describe asking prices within broad classes; they do not value an individual property.

Reader	Useful starting point	What to verify next
Buyers and tenants	City briefs and the area price book	Actual property specification, availability, annual rent and additional charges
Estate surveyors and valuers	Dated area/class benchmarks and coverage	Bedrooms, floor area, condition, tenure and achieved comparable transactions
Developers	Product mix, concentration and competing advertised stock	New supply pipeline, permissions and actual absorption
Investors and fund managers	Exposure concentration and differences between segments	Matched rental/sale evidence, vacancy and costs before modelling returns
Governments and researchers	Spatial coverage and formal advertised-market observations	Representative household, population and housing-stock evidence

Read the measures consistently

“Active” is a weekly stock count. “New” means first discovered by the scraper, not necessarily newly built or newly marketed. “Reductions” counts events, not the percentage discount or completed deals. A neighbourhood with few advertisements is not automatically an underserved market.

The period at a glance.

> **Observation freshness.** Latest source observation: 25 October 2026, 14:16 UTC. Week starts describe reconstructed inventory, not fresh collection dates. Counts after the latest observation do not establish activity through month-end. Source freshness checked November 1, 2026. Correction: the aggregate download has been restored and PDF pagination adjusted; published figures and commentary are unchanged.

> Coverage: 4 of 4 calendar week starts represented. 4 of 8598 source groups have no usable median price, including 0 with non-positive or non-finite values. These groups remain in inventory totals.

Evidence from the advertised properties observed by PS-0. Sales and rentals are read separately, with comparisons grounded in the property classes and locations represented.

Sales

8,914	853	36
Peak active · highest weekly total	First discovered this period	Price reduction events

- Lagos and Abuja account for 90.3% of observed listing-weeks. This concentration makes the national picture sensitive to their product mix.
- Among the selected detached house area benchmarks, Ibadan (Ibadan) is ₦248.8M and Banana Island (Lagos) is ₦4.5B. The price book gives the wider comparison; specification differences remain material.

Rentals

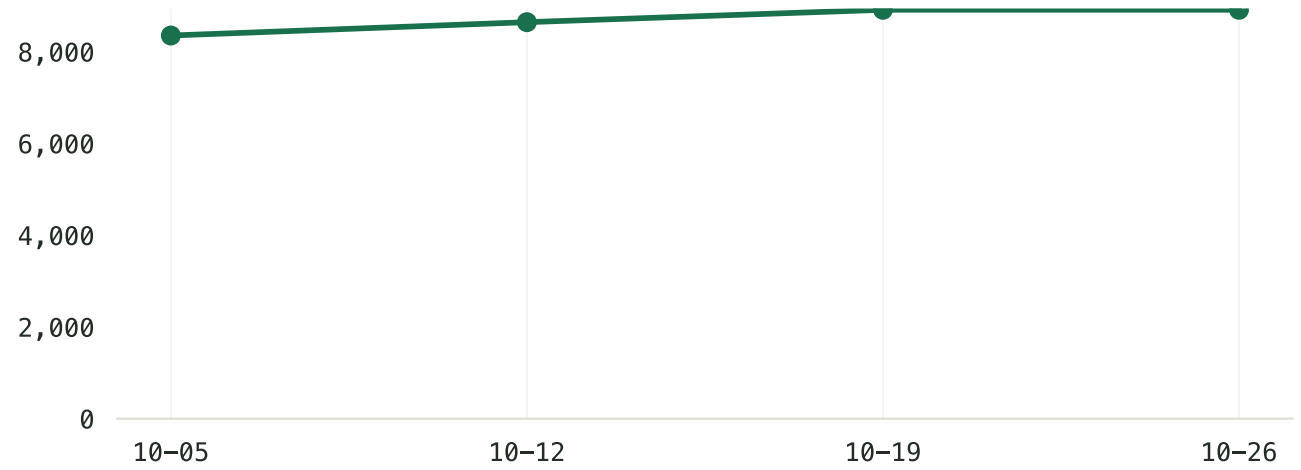

7,705	881	28
Peak active · highest weekly total	First discovered this period	Price reduction events

- Lagos and Abuja account for 96.1% of observed listing-weeks. This concentration makes the national picture sensitive to their product mix.
- Among the selected 2 bed flat area benchmarks, Ibadan (Ibadan) is ₦2.0M and Ikoyi (Lagos) is ₦29.9M / yr. The price book gives the wider comparison; specification differences remain material.

Sales Market Analysis

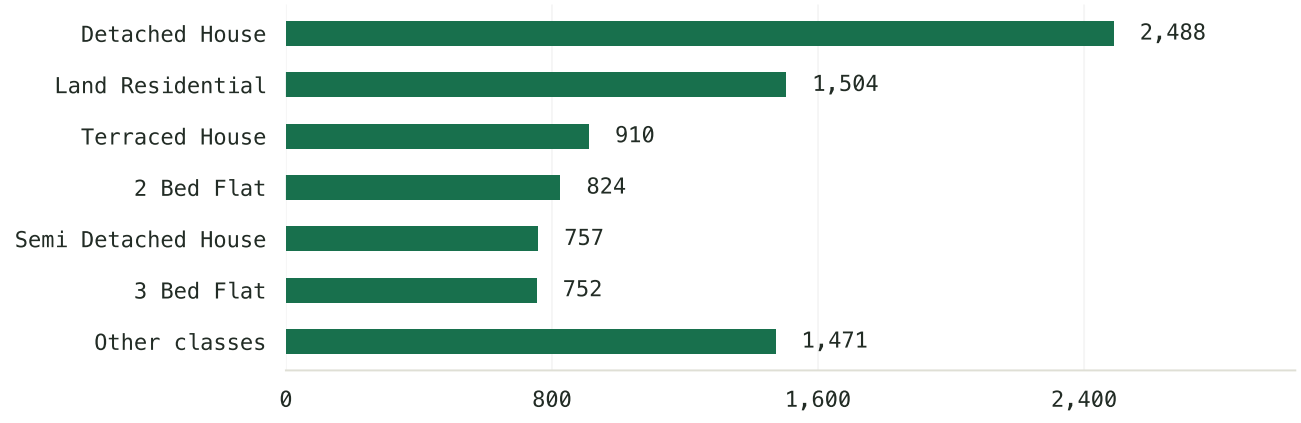

Through the PS-0 PropertyScraper lens, sales inventory observations cover 10 cities and 282 city/neighbourhood pairs. Lekki Phase 1 (LAGOS) maintained the highest concentration, averaging 726.8 active listings per observed week. This was followed by Lekki (LAGOS) with 702.5 average weekly active listings and Ikoyi (LAGOS) with 434.8 average weekly active listings.

Observed inventory through the period

Weekly active listings, grouped by snapshot start date. A listing may appear in multiple weeks. Changes can reflect observation coverage as well as supply.

The property mix

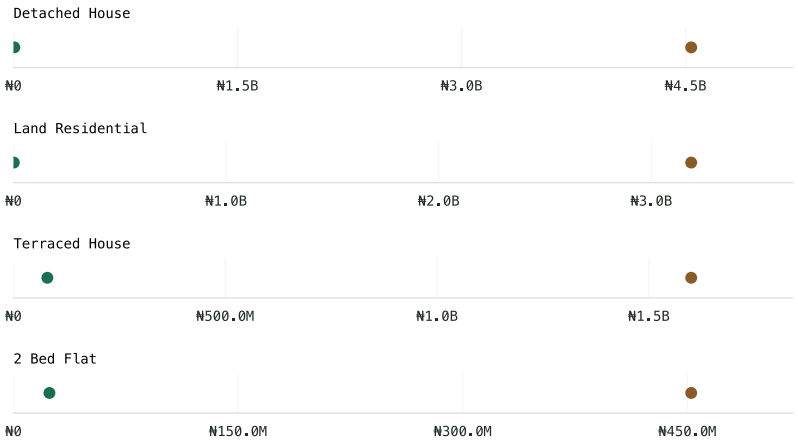

Average weekly active inventory, using the market's included week count as the denominator. Six largest classes shown; remaining classes are combined. Displayed counts are rounded.

Compare asking-price benchmarks.

Advertised asking price benchmarks across property classes show class-specific scales. For Detached Houses, Central Business District (ABUJA) recorded a mean observed group median of ₦5.7M (5.0 average weekly active listings across 4 priced weeks), while Banana Island (LAGOS) reached ₦4.5B (64.8 average weekly active listings across 4 priced weeks). For 2 Bed Flats, Jakande (LAGOS) registered ₦24.0M (6.0 average weekly listings), whereas Victoria Island (LAGOS) stood at ₦452.5M (62.5 average weekly listings).

Class-specific area benchmarks (NGN)

Independent horizontal scales for each property class. Green: first eligible affordable area. Amber: first eligible expensive area. Points use means of observed area group medians, not a listing-level distribution. Area names and figures appear below.

Property class / benchmark	Area	Coverage	Mean group median
Detached House Affordable	Central Business District Abuja	4 priced / 4 report weeks 5.0 active / observed week	₦5.7M
Detached House Expensive	Banana Island Lagos	4 priced / 4 report weeks 64.8 active / observed week	₦4.5B
Land Residential Affordable	Ilupeju Lagos	4 priced / 4 report weeks 6.2 active / observed week	₦1.4M
Land Residential Expensive	Maitama Abuja	4 priced / 4 report weeks 7.8 active / observed week	₦3.2B
Terraced House Affordable	Abijo Lagos	4 priced / 4 report weeks 3.0 active / observed week	₦80.0M
Terraced House Expensive	Banana Island Lagos	4 priced / 4 report weeks 13.0 active / observed week	₦1.6B
2 Bed Flat Affordable	Jakande Lagos	4 priced / 4 report weeks 6.0 active / observed week	₦24.0M
2 Bed Flat Expensive	Victoria Island Lagos	4 priced / 4 report weeks 62.5 active / observed week	₦452.5M

Where the advertised market is concentrated.

The two largest observed locations account for 90.3% of sales listing-weeks in this period. Source location labels include cities and state-level markets. This describes the platform's geographic exposure; it is not a share of national housing stock or transactions. Concentrated coverage means national summaries are especially sensitive to the product mix in these cities.

Source location	Average weekly active	Share of listing-weeks	Areas	First discovered	Reduction events
Lagos	6,856.5	78.8%	139	647	27
Abuja	1,005.5	11.5%	75	80	4
Ibadan	439.5	5.0%	13	73	2
Ogun	159.0	1.8%	30	13	0
PH	82.0	0.9%	5	6	0
EDO	66.5	0.8%	7	13	0
Enugu	51.0	0.6%	3	7	2
IMO	41.2	0.5%	5	14	1
Nassarawa	3.0	<0.1%	3	0	0
Kano	2.0	<0.1%	2	0	0

Source: PS-0 source CSV, restricted to the included market weeks. Average inventory uses the report's 4 week starts. Shares use summed active listing-weeks (34,825), not deduplicated properties.

What this means for comparisons

Use city and class benchmarks before interpreting an aggregate asking price. A large supply of land in one city and flats in another can change the national mix without any comparable property becoming more expensive. New discoveries also reflect collection activity, and should not be treated as construction completions.

What to monitor next

Compare geographic and property-class shares in the next complete issue before attributing a change in headline asking prices to market movement. Check whether collection coverage or the mix of areas has changed. For development or policy decisions, combine this advertised inventory with independently verified planning, pipeline and household evidence.

Read each submarket on its own terms.

Lagos

Lagos averages 6,856.5 active listings per included week across 139 areas. Detached House is the largest observed class, contributing 29.9% of the city's listing-weeks. The source records 647 first discoveries and 27 reduction events.

High-activity area / class	Asking-price benchmark	Average active / observed week	Priced / report weeks
Lekki Detached House	₦461.2M	369.5	4 / 4
Lekki Phase 1 2 Bed Flat	₦300.0M	187.5	4 / 4
Ikota Detached House	₦420.0M	179.0	4 / 4
Lekki Phase 1 Detached House	₦1.1B	170.0	4 / 4

Selected by observed inventory, not price. Benchmarks are means of group medians. Broad classes can still mix different bedroom counts, sizes and conditions.

Abuja

Abuja averages 1,005.5 active listings per included week across 75 areas. Detached House is the largest observed class, contributing 27.6% of the city's listing-weeks. The source records 80 first discoveries and 4 reduction events.

High-activity area / class	Asking-price benchmark	Average active / observed week	Priced / report weeks
Guzape Detached House	₦868.8M	37.2	4 / 4
Katampe Detached House	₦800.0M	30.5	4 / 4
Lugbe Bungalow	₦64.4M	26.8	4 / 4
Lugbe Detached House	₦201.2M	26.5	4 / 4

Selected by observed inventory, not price. Benchmarks are means of group medians. Broad classes can still mix different bedroom counts, sizes and conditions.

Practical reading

Buyers and tenants can use these observations to identify locations for a more detailed specification-matched search. Valuers should validate individual comparable properties and achieved prices. Developers should check whether competing advertisements match their proposed product; observed concentration alone does not demonstrate unmet demand.

Broader comparisons within property classes.

For each of the four most active classes, show up to ten eligible area groups selected by average observed inventory, then ordered by city and benchmark price. This includes middle-priced areas, but is an activity-selected sample rather than a complete or representative price distribution. At least three average weekly active listings and a usable price are required.

Detached House

Within this selected sample, Ibadan (Ibadan) has the lowest benchmark at ₦248.8M; Banana Island (Lagos) has the highest at ₦4.5B. These differences also reflect property mix.

City / area	Mean group median	Average active	Priced / report weeks
Ibadan / Ibadan	₦248.8M	78.2	4 / 4
Lagos / Ajah	₦250.0M	89.0	4 / 4
Lagos / Orchid	₦380.0M	150.5	4 / 4
Lagos / Ikota	₦420.0M	179.0	4 / 4
Lagos / Lekki	₦461.2M	369.5	4 / 4
Lagos / Magodo	₦500.0M	73.0	4 / 4
Lagos / Ikeja	₦500.0M	71.0	4 / 4
Lagos / Lekki Phase 1	₦1.1B	170.0	4 / 4
Lagos / Ikoyi	₦2.6B	140.5	4 / 4
Lagos / Banana Island	₦4.5B	64.8	4 / 4

Land Residential

Within this selected sample, Ikoyi (Lagos) has the lowest benchmark at ₦4.8M; Victoria Island (Lagos) has the highest at ₦750.0M. These differences also reflect property mix.

City / area	Mean group median	Average active	Priced / report weeks
Ibadan / Ibadan	₦71.1M	100.2	4 / 4
Lagos / Ikoyi	₦4.8M	55.0	4 / 4
Lagos / Banana Island	₦5.4M	32.2	4 / 4
Lagos / Ikorodu	₦12.0M	53.2	4 / 4
Lagos / Epe	₦12.0M	35.8	4 / 4
Lagos / Ibeju-Lekki	₦30.0M	101.5	4 / 4
Lagos / Sangotedo	₦80.0M	33.0	4 / 4
Lagos / Lekki	₦305.0M	72.0	4 / 4
Lagos / Lekki Phase 1	₦650.0M	50.2	4 / 4
Lagos / Victoria Island	₦750.0M	75.2	4 / 4

Interpret broad class matches with care. Bedrooms, floor area, condition and tenure may differ within a class. Land plot size and per-plot/per-unit quoting are not normalised. These are advertised benchmarks, not property valuations. Full eligible observations: aggregate comparison table (HTML edition).

Broader comparisons within property classes.

Terraced House

Within this selected sample, Ajah (Lagos) has the lowest benchmark at ₦110.0M; Ikoyi (Lagos) has the highest at ₦1.0B. These differences also reflect property mix.

City / area	Mean group median	Average active	Priced / report weeks
Lagos / Ajah	₦110.0M	48.2	4 / 4
Lagos / Sangotedo	₦123.8M	27.5	4 / 4
Lagos / Orchid	₦140.0M	48.2	4 / 4
Lagos / Ikota	₦165.0M	39.0	4 / 4
Lagos / Lekki	₦201.2M	77.8	4 / 4
Lagos / Ikate	₦320.0M	31.0	4 / 4
Lagos / Ikeja	₦350.0M	29.0	4 / 4
Lagos / Lekki Phase 1	₦581.2M	72.0	4 / 4
Lagos / Victoria Island	₦850.0M	32.0	4 / 4
Lagos / Ikoyi	₦1.0B	38.5	4 / 4

2 Bed Flat

Within this selected sample, Surulere (Lagos) has the lowest benchmark at ₦110.0M; Victoria Island (Lagos) has the highest at ₦452.5M. These differences also reflect property mix.

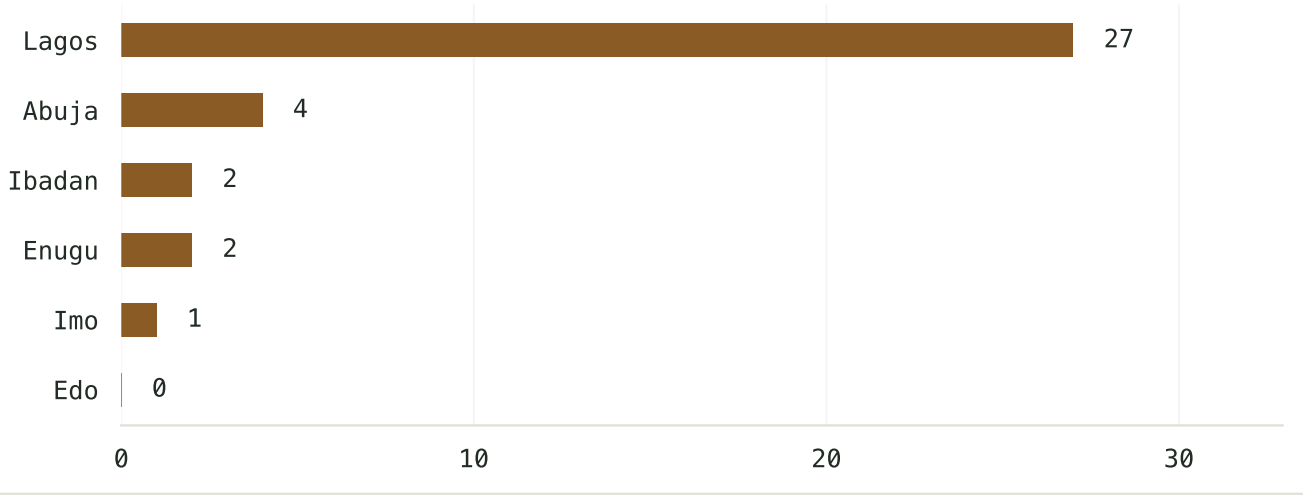

City / area	Mean group median	Average active	Priced / report weeks
Ibadan / Ibadan	₦135.0M	25.8	4 / 4
Lagos / Surulere	₦110.0M	18.5	4 / 4
Lagos / Ologolo	₦135.0M	20.0	4 / 4
Lagos / Lekki	₦150.0M	33.8	4 / 4
Lagos / Elegushi	₦182.5M	29.0	4 / 4
Lagos / Yaba	₦185.0M	22.0	4 / 4
Lagos / Ikate	₦197.5M	83.5	4 / 4
Lagos / Lekki Phase 1	₦300.0M	187.5	4 / 4
Lagos / Ikoyi	₦386.2M	21.8	4 / 4
Lagos / Victoria Island	₦452.5M	62.5	4 / 4

Interpret broad class matches with care. Bedrooms, floor area, condition and tenure may differ within a class. Land plot size and per-plot/per-unit quoting are not normalised. These are advertised benchmarks, not property valuations. Full eligible observations: aggregate comparison table (HTML edition).

Where expectations shift.

Observed advertised price adjustment activity recorded event counts across primary markets rather than discount rates. LAGOS recorded 27 reduction events, followed by ABUJA with 4 recorded reduction events and IBADAN with 2 recorded reduction events.

Recorded reductions by city

Event counts for the six cities with the most reductions. Multiple reductions on one listing count separately. Larger markets can generate more events; these are counts, not reduction rates.

> **36 events** observed. Peak week: 2026-10-12 (16 events). The data records adjustments to asking prices; it does not establish the final negotiated price.

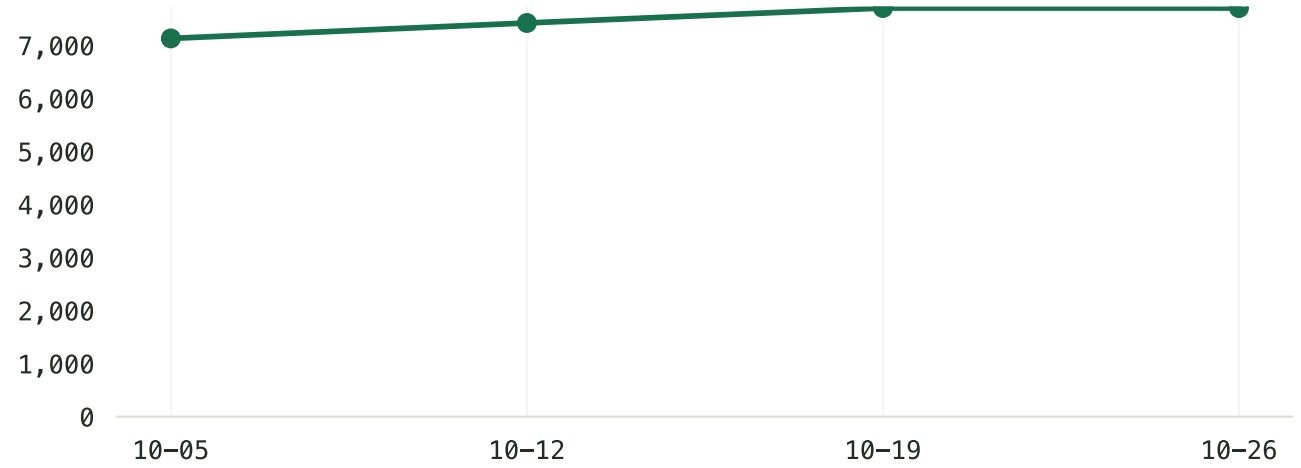

Reading the evidence

Inventory, property mix and asking-price benchmarks should be considered together. Coverage and class composition can move aggregate figures even when comparable properties have not changed price. See the detailed tables for the observations behind these figures.

Rentals Market Analysis

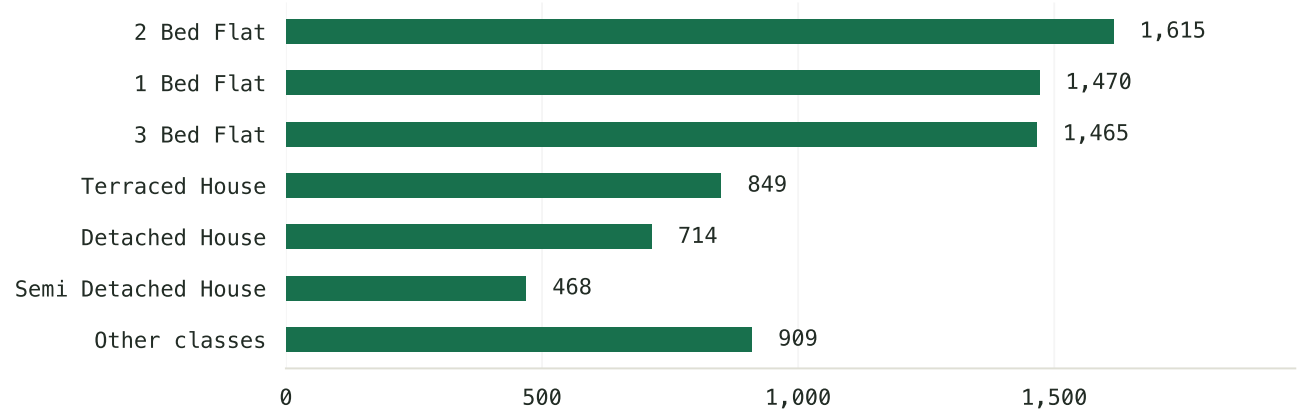

Rental listings observed via the PS-0 PropertyScraper lens span 9 cities and 201 city/neighbourhood pairs. Lekki Phase 1 (LAGOS) demonstrated the highest volume, averaging 976.8 active listings per observed week. Ikoyi (LAGOS) averaged 560.2 active listings per observed week, while Lekki (LAGOS) recorded an average of 551.2 active listings per observed week.

Observed inventory through the period

Weekly active listings, grouped by snapshot start date. A listing may appear in multiple weeks. Changes can reflect observation coverage as well as supply.

The property mix

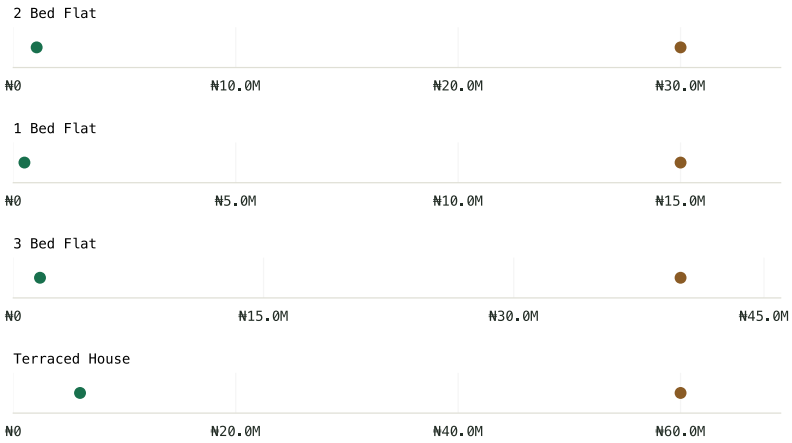

Average weekly active inventory, using the market's included week count as the denominator. Six largest classes shown; remaining classes are combined. Displayed counts are rounded.

Compare asking-price benchmarks.

Advertised asking rent benchmarks reflect class-specific distributions. Within 2 Bed Flats, Tipper Garage (IBADAN) posted a mean observed group median of ₦1.1M/yr (4.0 average weekly listings across 4 priced weeks), while Banana Island (LAGOS) registered ₦30.0M/yr (25.8 average weekly listings). For Terraced Houses, Gwarinpa (ABUJA) stood at ₦6.0M/yr (3.0 average weekly listings), compared to ₦60.0M/yr in Banana Island (LAGOS) with 52.2 average weekly listings.

Class-specific area benchmarks (NGN / year)

Independent horizontal scales for each property class. Green: first eligible affordable area. Amber: first eligible expensive area. Points use means of observed area group medians, not a listing-level distribution. Area names and figures appear below.

Property class / benchmark	Area	Coverage	Mean group median / yr
2 Bed Flat Affordable	Tipper Garage Ibadan	4 priced / 4 report weeks 4.0 active / observed week	₦1.1M
2 Bed Flat Expensive	Banana Island Lagos	4 priced / 4 report weeks 25.8 active / observed week	₦30.0M
1 Bed Flat Affordable	Obafemi Owode Ogun	4 priced / 4 report weeks 3.0 active / observed week	₦250.0k
1 Bed Flat Expensive	Banana Island Lagos	4 priced / 4 report weeks 9.0 active / observed week	₦15.0M
3 Bed Flat Affordable	Shomolu Lagos	4 priced / 4 report weeks 8.0 active / observed week	₦1.6M
3 Bed Flat Expensive	Banana Island Lagos	4 priced / 4 report weeks 72.5 active / observed week	₦40.0M
Terraced House Affordable	Gwarinpa Abuja	4 priced / 4 report weeks 3.0 active / observed week	₦6.0M
Terraced House Expensive	Banana Island Lagos	4 priced / 4 report weeks 52.2 active / observed week	₦60.0M

Where the advertised market is concentrated.

The two largest observed locations account for 96.1% of rentals listing-weeks in this period. Source location labels include cities and state-level markets. This describes the platform's geographic exposure; it is not a share of national housing stock or transactions. Concentrated coverage means national summaries are especially sensitive to the product mix in these cities.

Source location	Average weekly active	Share of listing-weeks	Areas	First discovered	Reduction events
Lagos	6,506.5	86.9%	125	788	27
Abuja	693.8	9.3%	54	59	1
Ibadan	235.0	3.1%	7	21	0
Ogun	25.0	0.3%	9	0	0
PH	16.2	0.2%	2	3	0
Enugu	12.0	0.2%	1	6	0
IMO	1.8	<0.1%	1	2	0
EDO	0.5	<0.1%	1	1	0
Kano	0.5	<0.1%	1	1	0

Source: PS-0 source CSV, restricted to the included market weeks. Average inventory uses the report's 4 week starts. Shares use summed active listing-weeks (29,965), not deduplicated properties.

What this means for comparisons

Use city and class benchmarks before interpreting an aggregate asking price. A large supply of land in one city and flats in another can change the national mix without any comparable property becoming more expensive. New discoveries also reflect collection activity, and should not be treated as construction completions.

What to monitor next

Compare geographic and property-class shares in the next complete issue before attributing a change in headline asking prices to market movement. Check whether collection coverage or the mix of areas has changed. For development or policy decisions, combine this advertised inventory with independently verified planning, pipeline and household evidence.

Read each submarket on its own terms.

Lagos

Lagos averages 6,506.5 active listings per included week across 125 areas. 2 Bed Flat is the largest observed class, contributing 21.9% of the city's listing-weeks. The source records 788 first discoveries and 27 reduction events.

High-activity area / class	Asking-price benchmark / yr	Average active / observed week	Priced / report weeks
Lekki Phase 1 2 Bed Flat	₦15.0M	261.8	4 / 4
Ikoyi 3 Bed Flat	₦36.2M	241.5	4 / 4
Lekki Phase 1 3 Bed Flat	₦20.0M	239.2	4 / 4
Victoria Island 3 Bed Flat	₦30.0M	164.5	4 / 4

Selected by observed inventory, not price. Benchmarks are means of group medians. Broad classes can still mix different bedroom counts, sizes and conditions.

Abuja

Abuja averages 693.8 active listings per included week across 54 areas. Terraced House is the largest observed class, contributing 20.0% of the city's listing-weeks. The source records 59 first discoveries and 1 reduction events.

High-activity area / class	Asking-price benchmark / yr	Average active / observed week	Priced / report weeks
Guzape Terraced House	₦16.0M	32.0	4 / 4
Katampe Terraced House	₦20.0M	18.0	4 / 4
Jahi 3 Bed Flat	₦12.1M	14.5	4 / 4
Jahi Terraced House	₦18.0M	14.2	4 / 4

Selected by observed inventory, not price. Benchmarks are means of group medians. Broad classes can still mix different bedroom counts, sizes and conditions.

Practical reading

Buyers and tenants can use these observations to identify locations for a more detailed specification-matched search. Valuers should validate individual comparable properties and achieved prices. Developers should check whether competing advertisements match their proposed product; observed concentration alone does not demonstrate unmet demand.

Broader comparisons within property classes.

For each of the four most active classes, show up to ten eligible area groups selected by average observed inventory, then ordered by city and benchmark price. This includes middle-priced areas, but is an activity-selected sample rather than a complete or representative price distribution. At least three average weekly active listings and a usable price are required.

2 Bed Flat

Within this selected sample, Ibadan (Ibadan) has the lowest benchmark at ₦2.0M; Ikoyi (Lagos) has the highest at ₦29.9M / yr. These differences also reflect property mix.

City / area	Mean group median / yr	Average active	Priced / report weeks	
Ibadan / Ibadan	₦2.0M	52.5		4 / 4
Lagos / Sangotedo	₦3.2M	48.0		4 / 4
Lagos / Ologolo	₦7.0M	48.0		4 / 4
Lagos / Lekki	₦7.5M	109.0		4 / 4
Lagos / Ilasan	₦9.0M	44.5		4 / 4
Lagos / Ikate	₦10.0M	106.0		4 / 4
Lagos / Elegushi	₦10.0M	66.0		4 / 4
Lagos / Lekki Phase 1	₦15.0M	261.8		4 / 4
Lagos / Victoria Island	₦20.0M	96.8		4 / 4
Lagos / Ikoyi	₦29.9M	67.0		4 / 4

1 Bed Flat

Within this selected sample, Ikorodu (Lagos) has the lowest benchmark at ₦368.8k; Victoria Island (Lagos) has the highest at ₦8.0M / yr. These differences also reflect property mix.

City / area	Mean group median / yr	Average active	Priced / report weeks	
Lagos / Ikorodu	₦368.8k	45.8		4 / 4
Lagos / Badore	₦1.5M	63.5		4 / 4
Lagos / Shomolu	₦1.6M	44.8		4 / 4
Lagos / Yaba	₦2.0M	51.2		4 / 4
Lagos / Sangotedo	₦2.0M	47.5		4 / 4
Lagos / Orchid	₦2.5M	98.2		4 / 4
Lagos / Ikota	₦3.0M	69.8		4 / 4
Lagos / Lekki	₦3.5M	115.2		4 / 4
Lagos / Lekki Phase 1	₦6.4M	124.2		4 / 4
Lagos / Victoria Island	₦8.0M	47.8		4 / 4

Interpret broad class matches with care. Bedrooms, floor area, condition and tenure may differ within a class. Land plot size and per-plot/per-unit quoting are not normalised. These are advertised benchmarks, not property valuations. Full eligible observations: aggregate comparison table (HTML edition).

Broader comparisons within property classes.

3 Bed Flat

Within this selected sample, Ibadan (Ibadan) has the lowest benchmark at ₦2.2M; Banana Island (Lagos) has the highest at ₦40.0M / yr. These differences also reflect property mix.

City / area	Mean group median / yr	Average active	Priced / report weeks	
Ibadan / Ibadan	₦2.2M	39.0		4 / 4
Lagos / Gbagada	₦6.0M	30.5		4 / 4
Lagos / Lekki	₦9.2M	80.2		4 / 4
Lagos / Elegushi	₦14.0M	29.0		4 / 4
Lagos / Ikate	₦15.0M	36.8		4 / 4
Lagos / Lekki Phase 1	₦20.0M	239.2		4 / 4
Lagos / Ikeja GRA	₦29.2M	22.5		4 / 4
Lagos / Victoria Island	₦30.0M	164.5		4 / 4
Lagos / Ikoyi	₦36.2M	241.5		4 / 4
Lagos / Banana Island	₦40.0M	72.5		4 / 4

Terraced House

Within this selected sample, Sangotedo (Lagos) has the lowest benchmark at ₦6.0M; Banana Island (Lagos) has the highest at ₦60.0M / yr. These differences also reflect property mix.

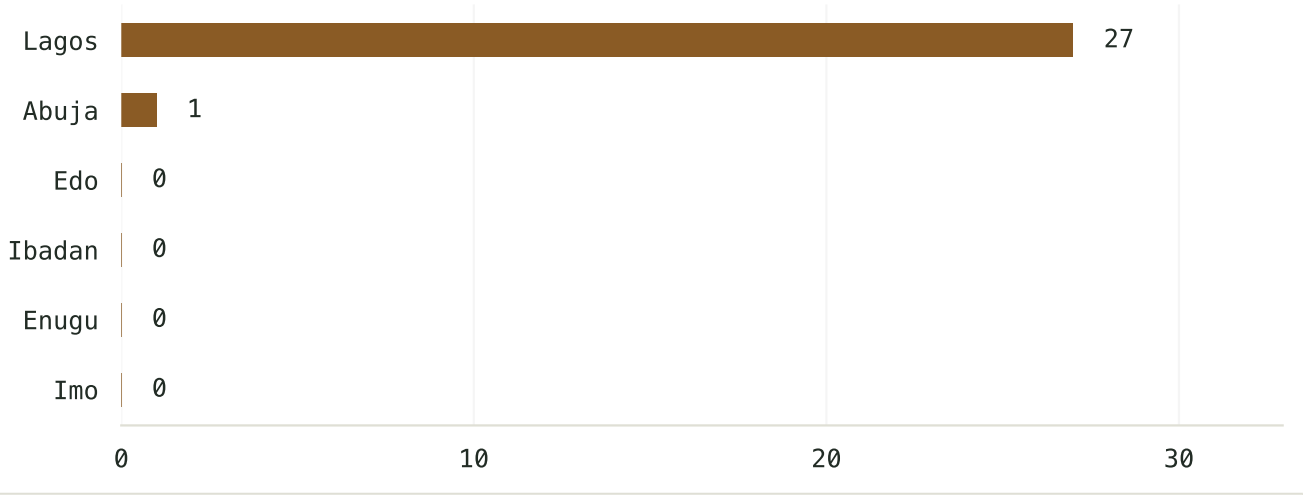

City / area	Mean group median / yr	Average active	Priced / report weeks	
Abuja / Guzape	₦16.0M	32.0		4 / 4
Lagos / Sangotedo	₦6.0M	26.2		4 / 4
Lagos / Ikota	₦8.0M	47.0		4 / 4
Lagos / Orchid	₦9.0M	50.2		4 / 4
Lagos / Lekki	₦10.0M	64.8		4 / 4
Lagos / Ikate	₦15.4M	29.5		4 / 4
Lagos / Lekki Phase 1	₦25.0M	92.0		4 / 4
Lagos / Victoria Island	₦32.5M	50.8		4 / 4
Lagos / Ikoyi	₦50.0M	62.8		4 / 4
Lagos / Banana Island	₦60.0M	52.2		4 / 4

Interpret broad class matches with care. Bedrooms, floor area, condition and tenure may differ within a class. Land plot size and per-plot/per-unit quoting are not normalised. These are advertised benchmarks, not property valuations. Full eligible observations: aggregate comparison table (HTML edition).

Where expectations shift.

Price adjustment metrics capture distinct event counts rather than discount rates across observed rental markets. LAGOS recorded 27 reduction events, while ABUJA registered 1 recorded reduction event. EDO recorded 0 reduction events during the observation period.

Recorded reductions by city

Event counts for the six cities with the most reductions. Multiple reductions on one listing count separately. Larger markets can generate more events; these are counts, not reduction rates.

> **28 events** observed. Peak week: 2026-10-19 (15 events). The data records adjustments to asking prices; it does not establish the final negotiated price.

Reading the evidence

Inventory, property mix and asking-price benchmarks should be considered together. Coverage and class composition can move aggregate figures even when comparable properties have not changed price. See the detailed tables for the observations behind these figures.

RESEARCH NOTES

How to read this report.

Source and scope. PS-0 reconstructs weekly groups from listing records and price-change history. Each group identifies city, neighbourhood, week, property class and market type. The source city field includes city and state-level market labels; location counts do not imply uniform administrative units. Sales and rentals are separate; short lets are excluded. Residential, land and commercial classes may be represented.

Inventory. Peak is the highest weekly total. Cumulative counts measure listing-weeks. The period includes weeks whose start date falls inside its calendar window; a final week can extend beyond month-end. The final week is excluded when its inventory falls below 30% of the preceding weeks' median, a heuristic that may also remove a real decline.

Pricing. Group prices are medians. Area benchmarks average those observed group medians; aggregate prices are unweighted medians of group medians. Affordable and expensive rankings require average observed weekly inventory of at least three and five listings respectively. Amounts are stored in kobo and divided by 100 for NGN display. Rental amounts assume annual asking rents in the source.

Historical limitations. Current listing status, price and property classification are reused in reconstructed weeks. These are not immutable historical price observations. Missing observations and portal access can influence coverage; the pipeline does not explicitly annotate outages.

Days on market. DOM measures first observation to the earlier of last observation and the week's end, with a one-day floor. Discovery can occur after the actual listing date. It is omitted from the main comparisons because this limitation constrains interpretation.

Authorship and use. Research by Isaac Akinmokun, with automated narrative assistance. Figures and tables derive from the computed inputs. This publication supplies general market observations, not investment advice. Source coverage and asking prices should be independently assessed before decisions.

Evidence and reproducibility. The aggregate comparison CSV (HTML edition) contains every eligible city/area/class group, including observations outside the printed selection. Data definitions and provenance (HTML edition) record the exact source fingerprint, included weeks and selection rules. Inventory eligibility uses observed weeks; city averages use every included report week. A missing area/week is not assumed to be a zero-price observation.
