01

Executive Summary

Analysis of the PS-0 PropertyScraper lens for July 2026 reveals a highly active but slightly consolidating residential sales market across 144 unique neighbourhoods. Cumulative active listings reached 1,115, with a peak of 391 active listings in the first week, tapering slightly to 386 by the final week of observation, representing a marginal -1.3% contraction. This slight reduction in active stock suggests a steady absorption of existing inventory relative to new market entries.

The market demonstrated robust transactional velocity, supported by 922 new listings introduced during the period. Median prices rose from ₦220.0M in the week of 6 July to stabilise at ₦250.0M in the subsequent weeks, indicating strong pricing power or a shift in listing composition toward higher-value properties. This upward price movement occurred despite a steady stream of new listings, pointing to resilient demand in premium segments.

Key Takeaways

- Lagos and Abuja dominate sales activity, representing over 87% of cumulative active listings observed.
- Median sales prices consolidated at ₦250.0M in the latter half of July, up from ₦220.0M.
- Magodo and Epe exhibit exceptional liquidity, both averaging just 1.0 day on market.
- Abuja commands a premium median price of ₦360.0M, outstripping the Lagos median of ₦271.2M.

Data Scope & Scraper Limitations: This report represents observations collected solely through the PS-0 PropertyScraper pipeline from advertised online listings. It should be understood as a specific digital lens on advertised prices and online inventory, not as an absolute, exhaustive generalisation of the entire physical real estate market across Nigeria.

02

Inventory Distribution — Most Active Areas

Lagos dominates the listing landscape, accounting for 849 of the cumulative active listings across 90 neighbourhoods. Magodo led the volume with an average of 4.9 active listings per week, closely followed by Lekki Phase 1 (4.4) and Lekki (4.0). This concentration highlights the primary focus of developers and agents on established premium corridors. Outside Lagos, Abuja maintained a significant footprint with 129 active listings across 32 neighbourhoods, while Ibadan showed emerging activity with 70 active listings. The rest of the market remains highly fragmented, with smaller hubs like Ogun (31 active listings) and Port Harcourt (17 active listings) contributing marginally to the overall digital footprint.

03

Pricing Tiers — Expensive & Affordable

Pricing dynamics show a stark contrast between premium coastal/suburban nodes and emerging mainland frontiers. At the upper end of the observed spectrum, Lekki (₦861.7M median, 2.7 days on market) and Lekki Phase 1 (₦592.5M median, 20.8 days on market) represent the high-value core. Magodo sits in the mid-to-high tier at ₦412.1M with a remarkably low 1.0-day average on market. Conversely, affordability is concentrated in peripheral areas. Epe represents the lowest entry point with a median price of ₦8.5M and a rapid 1.0-day turnaround, followed by Ikorodu at ₦30.5M. This wide spread underscores the dual-speed nature of the market, where premium assets command massive premiums while affordable land and outer-suburban housing move rapidly at lower price points.

04

Regional Performance Deep Dive

Lagos remains the undisputed engine of the residential sales market, capturing 849 active listings and 712 new listings across 90 neighbourhoods. The city's median listing price stood at ₦271.2M, driven by high-value activity in Magodo, Lekki Phase 1, and Lekki. Despite the high pricing, rapid absorption rates in areas like Magodo (1.0 day on market) suggest sustained demand for secure, serviced estates. Abuja's residential sales market, represented by 32 neighbourhoods, exhibited a premium pricing profile with a median price of ₦360.0M—surpassing the Lagos median. The territory recorded 129 active listings and 102 new listings, with Games Village emerging as the most active neighbourhood, reflecting strong institutional and high-net-worth investor interest in the capital's central districts. Beyond the dual hubs of Lagos and Abuja, Ibadan led secondary market activity with 70 active listings and a median price of ₦75.0M. Port Harcourt recorded a median of ₦77.5M across 3 neighbourhoods, while Enugu showed a median of ₦42.5M. Emerging markets like Ogun (₦20.2M median) and Edo (₦10.2M median) continue to serve as low-cost alternatives, catering to price-sensitive buyers looking outside major metropolitan boundaries.

06

Price Reduction Analysis

A total of 36 price reduction events were observed, peaking at 14 reductions during the week of 13 July. Lagos accounted for the vast majority (25 reductions), followed by Abuja with 7. This relatively low volume of discounts relative to the 1,115 cumulative active listings suggests that sellers remain confident in their pricing strategies, with minimal pressure to discount despite the high median price environment.

Peak reduction week: 2026-07-13 with 14 events.

The sales market is expected to maintain its upward pricing trajectory, supported by the step-up in weekly median prices to ₦250.0M. While inventory growth contracted slightly by -1.3%, the consistent influx of new listings (922 total) indicates healthy developer pipeline activity. Premium nodes in Lagos and Abuja will likely continue to dominate capital allocation, while rapid turnover in affordable segments like Epe suggests strong retail land-banking demand.

01

Executive Summary

The residential rental market monitored via the PS-0 PropertyScraper lens in July 2026 showed absolute stability in inventory, with active listings starting and ending the month at 366 units (0.0% growth). The market recorded 1,072 cumulative active listings and 930 new rental listings across 118 unique neighbourhoods.

Rental pricing remained remarkably inelastic throughout the month, with the weekly median rent holding firm at ₦8.0M/yr across all three observed periods. This flat pricing structure suggests a balanced market where landlord expectations align closely with tenant affordability thresholds at the median level.

Key Takeaways

- Weekly median rents remained completely flat at ₦8.0M/yr throughout July 2026.
- Lekki Phase 1 combines high rental values of ₦23.4M/yr with rapid absorption of 4.3 days.
- Lagos accounted for 87.5% of all rental price reductions, signaling localized landlord concessions.
- Abuja rental listings command a 50% premium over Lagos, with a median of ₦12.0M/yr.

Data Scope & Scraper Limitations: This report represents observations collected solely through the PS-0 PropertyScraper pipeline from advertised online listings. It should be understood as a specific digital lens on advertised prices and online inventory, not as an absolute, exhaustive generalisation of the entire physical real estate market across Nigeria.

02

Inventory Distribution — Most Active Areas

Lagos represents the overwhelming share of rental supply, accounting for 885 active listings across 83 neighbourhoods. Lekki Phase 1 was the most active rental hub, averaging 5.4 active listings per week, followed by Lekki (4.2) and Orchid (3.9). High-density luxury and mid-market apartments in these coastal zones continue to drive rental listing volumes. Abuja provided the second-largest rental pool with 134 active listings across 26 neighbourhoods, led by Katampe. Ibadan also demonstrated notable rental market depth with 46 active listings, while other regional markets like Ogun and Port Harcourt remained highly illiquid in terms of online rental listings.

The rental pricing spectrum is topped by premium Lagos island markets, with Lekki Phase 1 recording an average weekly median rent of ₦23.4M/yr and a swift average of 4.3 days on market. Other premium nodes like Ikoyi (₦36.5M/yr, DOM: 20.0d) and Lekki (₦29.6M/yr, DOM: 14.1d) represent the luxury ceiling. On the affordable end, Surulere offers a mainland entry point with a median rent of ₦3.2M/yr, though properties spend longer on the market (12.3 days). Orchid (₦9.6M/yr) and Ikate (₦12.1M/yr) represent mid-market options, bridging the gap between mainland affordability and premium island living.

Regional Performance Deep Dive

Lagos remains the core focus of rental search activity, capturing 885 active listings and 759 new listings. The city's median rent of ₦8.0M/yr reflects a diverse mix of high-end island apartments and mainland units. Lekki Phase 1 stands out as a highly liquid, high-yield node, combining premium pricing (₦23.4M/yr) with a low vacancy duration of 4.3 days. Abuja's rental market, spanning 26 neighbourhoods, commands a premium median rent of ₦12.0M/yr, significantly higher than the Lagos median. Katampe emerged as the top rental neighbourhood, reflecting sustained demand for modern apartments and townhouses among corporate tenants and diplomats seeking secure, well-located accommodation. Outside the primary metros, Ibadan represents the most structured rental market with 46 active listings and a highly accessible median rent of ₦4.8M/yr. Port Harcourt recorded a median rent of ₦4.5M/yr in GRA Port Harcourt, while Ogun's rental market, led by Magboro, posted a median of ₦2.8M/yr, serving as a budget-friendly commuter belt for Lagos.

06

Price Reduction Analysis

The rental market saw 48 price reduction events, peaking in the first week of July with 21 reductions. Lagos accounted for 42 of these adjustments, indicating that while median rents remained stable at ₦8.0M/yr, some landlords in oversupplied or overpriced niches had to adjust expectations downward to secure tenants quickly.

Peak reduction week: 2026-07-06 with 21 events.

07

Market Outlook

The rental market is poised for steady performance, with the 0.0% inventory growth indicating a highly balanced supply-demand equilibrium. The flat median rent of ₦8.0M/yr suggests that rental rates have hit a temporary affordability ceiling. Landlords in premium

pockets like Lekki Phase 1 will continue to enjoy rapid tenant absorption, while those in slower mainland markets may face pressure to offer concessions.

08

Methodology & Data Notes

Data source: PS-0 PropertyScraper autonomously collects listings from PropertyPro.ng, PrivateProperty.com.ng, and NigeriaPropertyCentre.com on a weekly discovery cadence with mid-week health checks.

Neighbourhood normalisation: Raw neighbourhood strings from all portals are normalised to a canonical name via a manually-curated mapping table. Only neighbourhoods with $\geq 90\%$ normalisation coverage are included in analysis.

Price storage: All prices are stored internally as 64-bit integer kobo values to eliminate floating-point arithmetic errors. NGN figures displayed in this report are exact integer divisions by 100.

Median vs. mean pricing: Median is used throughout to reduce skew from outlier luxury listings. P25, P75, and P90 data are available in the source dataset but excluded from this summary report for brevity.

Price reductions: An event is recorded when a listing's price decreases between two consecutive observations. Multiple reductions on the same listing count as separate events.

Days on market (DOM): Computed as the number of days between a listing's first observed date and the snapshot date. Listings present since before the pipeline's inception show DOM from the first observation date, not the actual listing date.

Outage handling: On weeks where portal access was blocked or failed, active inventory is carried forward from the prior week. New listing counts are recorded as zero for that week. These weeks are noted in the weekly table.
