Across 8 cities

During the four-week period of June 2026, the Nigerian residential property market experienced a significant expansion in active inventory, with total active listings growing by 23.0% from 9,864 in the first week to a peak of 12,131 in the final week. This supply surge was driven by the discovery of 3,752 new listings across 194 unique neighbourhoods, bringing cumulative active listings to 43,648. Despite the influx of new stock, pricing dynamics remained relatively stable, with the national median price fluctuating between ₦15.0M and ₦17.2M.

The market also recorded 263 price reduction events, peaking in the second week of the month with 78 reductions, indicating selective developer and vendor discounting to stimulate transaction volumes in a highly competitive landscape. Regional performance was heavily dominated by Lagos, which accounted for the vast majority of market activity and price adjustments. However, emerging secondary markets and premium enclaves in Abuja and Enugu demonstrated resilient pricing structures, highlighting a fragmented market where high-end residential assets continue to command substantial premiums.

Key Takeaways

- Active listings grew by 23.0% over the four-week period, peaking at 12,131 properties.
- Lagos dominated market activity, accounting for 115 neighbourhoods and 222 of the 263 price reductions.
- Apapa emerged as the most expensive neighbourhood, commanding an average median price of ₦1300.0M.
- Abuja maintained a strong premium profile with a city-wide median price of ₦30.0M.
- Enugu and Port Harcourt secondary markets showed high median prices of ₦175.0M and ₦120.0M respectively.

Inventory Distribution — Most Active Markets

The market's inventory trajectory in June 2026 reflects a robust expansion phase, starting at 9,864 active listings and climbing steadily to close at 12,131. This 23.0% growth in active listings over a four-week window indicates a rapid accumulation of stock, supported by a total of 3,752 new listings discovered. Notably, the third week of the month saw a temporary pause in new listings with zero entries recorded, yet active inventory remained high at 10,772 before surging again in the final week with 1,361 new entries. This inventory distribution is heavily concentrated in prime metropolitan corridors, signalling strong developer confidence and a pipeline of completions hitting the market. The accumulation of active listings suggests that while supply is accelerating, absorption rates may be lagging, creating a buyer's market in specific high-density nodes where options are abundant.

#	NEIGHBOURHOOD	CITY / STATE	AVG. WEEKLY ACTIVE LISTINGS
1	Lekki Phase 1	LAGOS	1,434.0
2	Lekki	LAGOS	816.2
3	Victoria Island	LAGOS	617.5
4	Ikoyi	LAGOS	617.0
5	Ikate	LAGOS	468.2
6	Ikota	LAGOS	421.8
7	Ikeja	LAGOS	345.2
8	Orchid	LAGOS	298.0
9	Elegushi	LAGOS	236.5
10	Banana Island	LAGOS	229.2

Average computed across all snapshot weeks in the reporting period. Neighbourhoods with fewer than 10 average weekly listings are excluded from pricing tables.

Pricing structures across the analysed markets reveal a stark disparity between the luxury ceiling and the affordable segment. The ultra-luxury tier is led by Apapa in Lagos, commanding a remarkable average median price of ₦1300.0M with a days on market (DOM) of 44.0 days, followed closely by Pinnock Beach Estate at ₦1000.0M with a DOM of 41.5 days. Other premium locations such as Omole Phase 2 (₦650.0M) and Royal Garden Estate (₦485.0M) further underscore the resilience of high-end residential real estate, where short DOMs like Royal Garden Estate's 16.9 days indicate rapid capital deployment by affluent buyers. Conversely, the affordable end of the market features nominal median prices, with Eko Atlantic recording an average median of ₦448k (DOM of 40.8 days) and Wuse in Abuja at ₦656k (DOM of 32.5 days), which likely reflect short-term rental yields or micro-unit listings rather than capital values. Traditional affordable residential hubs such as Mushin (₦1,000k) and Onipanu (₦1,200k) continue to offer entry-level access, maintaining consistent transaction velocity with days on market averaging between 30 and 40 days.

Most Expensive Areas

#	Neighbourhood	Avg. Median Price	Avg. Dom
1	Apapa LAGOS	₦1.30B	44.0d
2	Pinnock Beach Estate LAGOS	₦1000.0M	41.5d
3	Omole Phase 2 LAGOS	₦650.0M	35.2d
4	Omole Phase 1 LAGOS	₦488.5M	38.0d
5	Royal Garden Estate LAGOS	₦485.0M	16.9d
6	Nicon Town LAGOS	₦373.8M	37.5d
7	Amuwo Odofin LAGOS	₦286.2M	20.8d
8	Guzape ABUJA	₦270.0M	32.3d
9	Ojodu Berger LAGOS	₦268.8M	39.5d
10	Kado ABUJA	₦241.2M	34.2d

Most Affordable Areas

#	Neighbourhood	Avg. Me
1	Eko Atlantic LAGOS	₦448k
2	Wuse ABUJA	₦656k
3	Mushin LAGOS	₦1.0M
4	Onipanu LAGOS	₦1.2M
5	Ilupeju LAGOS	₦1.2M
6	Kosofe LAGOS	₦1.6M
7	Badore LAGOS	₦1.8M
8	Seaside Estate LAGOS	₦1.8M
9	Lagos Business School LAGOS	₦2.0M
10	Shomolu LAGOS	₦2.0M

Lagos

Lagos remains the undisputed anchor of the Nigerian residential market, commanding 115 of the 194 unique neighbourhoods and a median price of ₦15.0M. Activity was heavily concentrated in the Lekki corridor, with Lekki Phase 1 leading all neighbourhoods with an average of 1434.0 active listings per week, followed by Lekki at 816.2 and Victoria Island at 617.5. The state also bore the brunt of market corrections, accounting for 222 of the 263 total price reduction events, indicating that developers in high-supply zones are actively adjusting expectations to clear inventory.

Abuja (FCT)

Abuja's residential market demonstrated robust premium positioning across its 48 active neighbourhoods, achieving a city-wide median price of ₦30.0M, with Katampe emerging as the top performing area. High-end enclaves such as Guzape and Kado posted substantial average median prices of ₦270.0M (DOM of 32.3 days) and ₦241.2M (DOM of 34.2 days) respectively, reflecting sustained institutional and private wealth interest. The capital city recorded a moderate 29 price reduction events, suggesting a more stable supply-demand equilibrium compared to the high-velocity Lagos market.

Katampe

MEDIAN PRICE

₦30.0M

Other Cities (Ibadan, Enugu, Port Harcourt, Edo, Ogun, Imo)

Beyond the primary hubs, secondary markets displayed highly localised pricing dynamics across limited inventories. Enugu led these regional markets with a substantial median price of ₦175.0M across 2 neighbourhoods, followed by Port Harcourt at ₦120.0M across 2 neighbourhoods, indicating tight supply in premium regional pockets. Edo's 5 neighbourhoods, led by Asaba, posted a median price of

₦72.5M, while Ibadan (5 neighbourhoods, median ₦20.0M), Ogun (15 neighbourhoods, median ₦7.4M), and Imo (3 neighbourhoods, median ₦4.6M) represented the more accessible regional tiers, with minimal price reduction activity across these territories.

Weekly Inflow & Price Reduction Trends

WEEK START	ACTIVE LISTINGS	NEW LISTINGS	PRICE REDUCTIONS	MEDIAN PRICE (NGN)	
2026-06-01	9,864	1,268	54	₦15.0M	
2026-06-08	10,881	1,123	78	₦17.0M	
2026-06-15	10,772	0	71	₦17.2M	
2026-06-22	12,131	1,361	60	₦15.0M	

Price Reduction Analysis — Seller Behaviour

The occurrence of 263 price reduction events during the month serves as a critical leading indicator of shifting market leverage. Peak discounting occurred during the week of 2026-06-08 with 78 events, coinciding with a period of high active listings at 10,881. This concentration of price cuts—predominantly in Lagos with 222 events and Abuja with 29 events—suggests that developers and vendors are responding to inventory build-up by offering concessions to maintain liquidity, rather than holding out for peak valuations in a crowded market.

Peak reduction week: 2026-06-08 with 78 events.

Market Outlook

Looking ahead, the 23.0% expansion in active listings over June 2026 is expected to exert downward pressure on median prices in high-density corridors like Lekki Phase 1 unless absorption rates accelerate. The combination of rising inventory and active price discounting suggests that the market is transitioning into a buyer-favourable phase. Investors should target high-liquidity enclaves with low days on market, such as Royal Garden Estate, while preparing for extended marketing periods in secondary regional markets.

Data source: PS-0 PropertyScraper autonomously collects listings from PropertyPro.ng, PrivateProperty.com.ng, and NigeriaPropertyCentre.com on a weekly discovery cadence with mid-week health checks.

Neighbourhood normalisation: Raw neighbourhood strings from all portals are normalised to a canonical name via a manually-curated mapping table. Only neighbourhoods with $\geq 90\%$ normalisation coverage are included in analysis.

Price storage: All prices are stored internally as 64-bit integer kobo values to eliminate floating-point arithmetic errors. NGN figures displayed in this report are exact integer divisions by 100.

Median vs. mean pricing: Median is used throughout to reduce skew from outlier ultra-luxury listings. P25, P75, and P90 data are available in the source dataset but excluded from this summary report for brevity.

Price reductions: An event is recorded when a listing's price decreases between two consecutive observations. Multiple reductions on the same listing count as separate events.

Days on market (DOM): Computed as the number of days between a listing's first observed date and the snapshot date. Listings present since before the pipeline's inception show DOM from the first observation date, not the actual listing date.

Outage handling: On weeks where portal access was blocked or failed, active inventory is carried forward from the prior week. New listing counts are recorded as zero for that week. These weeks are noted in the weekly table.
